First Draft: Team Handover and Checklist

Operating Systems CEP | Topic 23 | 22 October 2026

The current report, master workbook and all three individual review packages are integrated. This is the complete first-draft package for team review. Its limitations are written into the report; it is not certified as an exhaustive final SLR.

Use 20 unique primary studies. Sir's clarified target is 20; the written guideline says 15–20. The 21 reports include two REEF versions belonging to one study. No extra three studies are needed merely to increase the number.

Meaning	Status	How to read this guide
Prepared and integrated	Green	The stated first-draft artifact or source-review task is done.
Partly closed	Yellow	The artifact exists, but a method, source-version or verification condition remains.
Not performed	Red	The specified research action or actual human vote is absent.

Member package	Source review completed	What is still personal work
Eshaal: S001–S007 + P023	8 report copies; 70 QA items; 48 inclusion checks; 30 outcomes.	Independent check of Raazia's S008–S014.
Raazia: S008–S014	7 copies; 70 QA items; 42 inclusion checks; 13 outcomes.	Independent check of Rameen's S015–S020; reconcile team returns.
Rameen: S015–S020	6 copies; 60 QA items; 36 inclusion checks; 9 outcomes.	Independent check of Eshaal's S001–S007 + REEF companion.

All 200 included-study QA items and all 52 retained outcomes now have source-review entries. InferFair access and its two outcomes are closed. Master integration is complete. The original baseline and protocol remain unchanged.

1. Open these files first

File in the complete ZIP	Purpose
01_Report/CEP_Task3_First_Draft.pdf	Read this as the main CEP first draft. It includes the analytical report, references and audit appendices.
01_Report/CEP_Task3_First_Draft.docx	Editable version of the same report content.
02_Master/ CEP_Task3_Evidence_Workbook.xlsx	Current master: screening, study IDs, QA, outcomes, analysis and source-review audit.
03_Member_Reviews/Eshaal, Raazia, Rameen	Each member's report, workbook, source checks and corrections. These are supporting files, not three separate final CEP reports.
04_Team/First_Draft_Team_Plan.pdf	This guide and the specific teammate return instructions.
05_Methodology/ methodology_corrections.csv	Each audit issue, supporting evidence, justified correction or explicit remaining limitation.
05_Methodology/ Remaining_559_Screening_Queue.csv	All 559 retained records, available abstract text, reviewer assignments and blank decision fields.
06_Protocol_and_Guidelines	Submitted protocol and Sir's requirements; amendments are separate.
07_Evidence_and_Reproducibility	Frozen baseline, current CSVs, available search exports, logs and build scripts.

Third-party reading PDFs are kept outside the public package/repository. The source catalogue gives URLs, report versions, hashes and page anchors. Thus "complete work package" means all project deliverables and available research records, not redistribution of licensed papers or recovery of missing historical exports.

Older smaller review ZIPs are superseded by the new complete ZIP. Do not submit an older team-review-only ZIP as the whole Task 3.

2. What Rameen and Eshaal should do now

An independent check means reading the cited original source and recording your own initial judgment before comparing it with the prepared answer. Reading only the CEP draft is useful editing, but it does not replace the protocol's separate source checks.

Person	Exact assignment	Return
Rameen	Check Eshaal's P001–P007 and companion P023: 70 QA items, 48 inclusion checks, 30 outcomes and REEF version linkage.	Your own score/decision for each assigned item, source page/table, actual name/time, corrections and disagreements.
Eshaal	Check Raazia's P008–P014: 70 QA items, 42 inclusion checks and 13 outcomes. Keep ParvaGPU manuscript/final condition visible.	The same item-level return; do not mark a source checked unless you opened it.
Raazia	Check Rameen's P015, P018–P022: 60 QA items, 36 inclusion checks and 9 outcomes. Resolve disagreements after independent returns.	An adjudication log with original judgments, source-based resolution and report/workbook changes.

1. Open the assigned member workbook and the cited source version. Keep your initial decisions in the independent fields or a separate return copy.

2. For each retained number, verify metric, units, baseline, GPU/model/load, figure/table and whether it is a maximum, mean or percentile.

3. For each QA and inclusion criterion, record your own evidence-based judgment. Missing reporting stays missing; performance protection is not proof of security.

4. Enter your real name and actual time. Preserve disagreement before discussion. Resolve disagreements with a source anchor and a reason.

5. After adjudication, read the main CEP draft together for clarity, citations, tables, consistency and the conditional recommendation.

No independent human signatures have been supplied yet. The return template is: reviewer | actual UTC/timezone | study/report/version | item/evidence ID | initial judgment | source page/table | correction | reason | adjudicated result.

3. After Task 2: headings 15–22

Heading	Preparation	What the draft now contains
15 Taxonomy	Green	Temporal, spatial/partition and runtime/API controls; assumptions and boundaries.
16 Comparison	Green	Within-source contrasts and context-aware matrix; Tally metric and REEF mapping corrected.
17 Trade-offs	Green	Latency/utilization, foreground protection, memory/transfer, trust and implementation costs; adverse findings retained.
18 Conflicting evidence	Green	Different setups are distinguished from true disagreement; within-source tensions explained.
19 Synthesis	Green	All five protocol RQs answered with linked evidence and comparability limits.
20 Recommendation	Green	Conditional choices, benefits, sacrifices, alternatives and local validation; InferFair source results integrated.
21 Research gaps	Green	Corpus-derived gaps and prior-survey comparison; no “first survey” or worldwide-absence claim.
22 Validity	Green	559 selection branch, title-only decisions, search provenance, source versions and independent-review gaps explicitly reported.

These sections have been written and integrated. They do not need to be started again. Their independent source verification remains Yellow until the real teammate returns are recorded. New eligible studies from further screening would require an update.

Current key corrections: InferFair 524.29 SLO-compliant requests/s and unfairness 1.05 under the specific Table 3 setup; ArkGPU’s low-contention regression retained; Dyna-P sensitivity tied to its local experiment; KRISP kept in its AMD emulation context; Tally’s 1.19 versus 1.65 denotes total normalized system throughput.

4. Heading 23: mandatory deliverables (1–13)

Deliverable	Status	Evidence / condition
1 Final SLR report	Green	Complete first draft in PDF and Word; bounded-method limitations remain.
2 Engineering problem	Green	Report §1: decision, alternatives and conflicting requirements.
3 Objectives	Green	Report §1.
4 3–5 RQs	Green	Five submitted-protocol questions, report §2.
5 SLR protocol	Green	Original submitted PDF preserved; amendments separate.
6 Databases and justification	Green	Report §3 and Search Log.
7 Complete search strings	Yellow	Recorded strings supplied; historical fields/run mapping incomplete.
8 Inclusion/exclusion criteria	Green	Report §3; implementation deviations retained.
9 Database-wise search results	Yellow	Recorded counts retained; display/export discrepancies unresolved.
10 Search/screening log	Yellow	4,075 canonical rows; 559 not advanced; title-only limits disclosed.
11 Duplicate-removal record	Green	114 unique removed IDs with valid canonical targets; semantic pair audit separate.
12 PRISMA 2020 flow	Yellow	Arithmetic and bounded branch documented; exhaustive selection not established.
13 QA checklist/scores	Yellow	200 source-reviewed items, current 338/396 applicable points; independent votes absent.

4. Heading 23: mandatory deliverables (14–25)

Deliverable	Status	Evidence / condition
14 Included primary studies	Green	20 unique studies / 21 reports; target met. ParvaGPU version condition disclosed.
15 Extraction sheet	Green	52 retained outcomes source-checked; two transparent calculations.
16 Taxonomy	Green	Mechanism-based classification in report/workbook.
17 Comparative matrix	Green	Context-aware comparisons integrated.
18 Trade-off analysis	Green	Benefits and sacrifices tied to conditions.
19 Conflicting evidence	Green	Source tensions and unmatched comparisons distinguished.
20 All RQ answers	Green	Five synthesis answers in report §6.
21 Engineering recommendation	Green	Conditional matrix in report §10; supported source corrections applied.
22 Research gaps	Green	Corpus-scoped gaps and future experiments.
23 Threats to validity	Green	Limitations and applied mitigations in report §12.
24 Complete references	Yellow	IEEE-style references present; ParvaGPU final-text equivalence not verified.
25 Supporting verification files	Green	Current and frozen data, three member packages, methods audit and scripts included.

Green certifies the stated preparation task. It does not mean the historical search is fully reproducible or the independent-review requirement has been met. The report preserves those separate limitations.

5. Heading 24: report structure

Required part	Written and integrated content
1 Introduction	Background, engineering decision, motivation, objectives and bounded contribution.
2 Research questions	Five original protocol RQs.
3 Research methodology	Protocol; databases; strings; eligibility; source review; appraisal; extraction; synthesis; actual deviations.
4 PRISMA study selection	Counts, screening, eligibility, included reports/studies and bounded flow.
5 Classification / taxonomy	Mechanisms, assumptions and control boundaries.
6 Results and evidence synthesis	Organized by RQ, not one summary per paper.
7 Comparative analysis	Metric/context matrix and limits of comparisons.
8 Engineering trade-offs	Benefits, sacrifices, costs and adverse outcomes.
9 Discussion	Conditions, apparent conflicts, version effects and strength of evidence.
10 Engineering recommendation	Scenario, candidate, benefit, sacrifice, alternative and validation.
11 Research gaps	Corpus-derived questions and needed experiments.
12 Threats to validity	Selection, abstracts, provenance, reviewer, version and measurement limitations.
13 Conclusion	Conditional engineering answer with its evidence boundary.
References and appendices	IEEE references, search entries, study cards, QA, all outcomes, calculations and deliverable crosswalk.

The main PDF is the report to review. The long appendices provide traceability; their page count is not evidence of quality. Confirm any local instructor page limit before printing the full audit appendices.

6. Headings 25–26: what a strong draft must show

Heading 25 outcome	Status	Evidence to inspect
Systematic evidence collection	Yellow	Search Log, PRISMA and preserved baseline; historical gaps and bounded selection remain.
Critical evaluation	Green	200 source-appraised QA items and explicit reporting weaknesses.
Classification	Green	Mechanism families and boundaries, not a list of products.
Comparison	Green	GPU, workload, metric and baseline stay attached to results.
Trade-off analysis	Green	For each benefit, state the sacrifice and conditions.
Synthesis	Green	All five RQs answered across papers.
Engineering decision	Green	Conditional recommendation traceable to report and outcome IDs.
Heading 26 quality expectation	**Status**	**Current position**
Every included paper traceable	Green	Study/report IDs, source version, URL/hash and anchors.
PRISMA counts verifiable	Yellow	Arithmetic checked; incomplete selection process disclosed.
Searches reproducible	Yellow	Original registered strings/counts preserved; missing run/archive/facet evidence remains a limitation.
Inclusion/exclusion documented	Yellow	Decisions and criteria exist; 559 retained records still need assessment.
No fabricated/selective evidence	Green	Unknowns preserved; adverse findings and source boundaries retained.
Claims supported by citations	Green	52 retained outcomes source-checked and corrections integrated; independent review remains pending.
Limitations/conflicts transparent	Green	Explicit validity discussion and method-correction register.

7. The 559 records: exact next steps

Do not add “stop when we have 20” or “abstract unavailable” as a new scientific exclusion rule. Twenty is the minimum target, not a maximum eligible-study limit. A record may be excluded only for an established criterion supported by available evidence.

All 559 have been listed in the screening queue. First-review allocation: Eshaal 187, Raazia 186, Rameen 186; each record also has a different independent reviewer. Recovered abstract text is supplied for 235. The frozen baseline marks another 25 abstract-available but their bytes were not recovered here; 299 are marked unavailable.

1. Review title/type/year against the submitted criteria. Use the available abstract; when relevance is uncertain, obtain the abstract or full text before deciding.

2. Each assigned reviewer enters an initial decision, exact IC/EC, short reason, evidence location and actual time. Discuss only after preserving the independent decisions.

3. Resolve disagreements. Seek full texts for potentially eligible records; record actual requests, versions, access attempts and reasons if unobtainable.

4. Apply every inclusion criterion at full text. Link companion reports to one study. Include all newly eligible studies even if the count exceeds 20.

5. Source-appraise new studies, extract outcomes and update taxonomy/RQ answers/recommendations. Recompute PRISMA from logged events; do not invent retrieval failures.

6. If the team submits the present bounded first draft, keep the 559 branch and deviation visible. Instructor acceptance of bounded scope has not been supplied.

Prepared assistance can recover metadata, organize evidence, propose criterion-based decisions and integrate genuine returns. It cannot create another person’s independent judgment or reconstruct unrecorded search events.

8. Freeze the first draft: team checklist

Action	Status	Owner / completion evidence
Integrate all three source-review packages	Green	Complete in current report and master workbook.
Close InferFair missing source	Green	Correct supplied publisher copy; 10 QA items, 6 inclusion checks, 2 outcomes completed.
Address methodology audit	Green	Every issue has a supported correction or an explicit limitation in methodology_corrections.csv.
Prepare all mandatory deliverables and report sections	Green	See headings 23–26 crosswalk above.
Record real independent source checks	Red	Rameen ↔ Eshaal/Raazia rotation described on page 3; actual returns absent.
Close 559-record scope	Red	Complete screening or retain bounded deviation with dated instructor direction if obtained.
Resolve historical search and ParvaGPU version unknowns	Yellow	Recover evidence if possible; otherwise retain precise limitations.
Read the main CEP draft together	Yellow	Check interpretation, citations, tables, spelling and conditional conclusion.
Verify repository publication	Yellow	Use publication_receipt.json for verified remote commit; a local commit is not proof of main.

The team can now review one integrated first draft. A final read can approve wording and presentation, while the research-method conditions remain separately visible. Do not mark unfinished source votes or selection work complete merely because the package is ready to read.
