1 Background

GPU sharing is an operating-system and runtime decision about how concurrent clients use compute, memory and scheduling capacity on one physical accelerator. Throughput and model density can improve while request tails, interference, memory pressure or isolation worsen. The relevant comparison is therefore conditional on workload, hardware and baseline, rather than a single system-wide ranking.

The assigned families are temporal sharing, MPS-style concurrency, MIG partitions, API interception/remoting and hybrids. Product documentation supplies definitions, not measured inference gains. The reviewed primary reports supply the experimental observations.

Context and review methods: [1, 2, 3, 4, 5, 6].

2 Engineering problem and scope

Choose a sharing mechanism for concurrent inference on one physical GPU under specified latency, utilization, density and isolation requirements. Multi-GPU papers are eligible only when their local co-tenant inference evidence is separable. Mixed training/inference reports are assessed using inference results rather than relabelling training throughput. Remoting is relevant where the endpoint GPU is shared and tenant effects are evaluable.

Decision constraint	Implication
Tail-latency objective	A mean or isolated kernel latency cannot establish request P99/ P98 compliance.
Memory and model density	Additional functions may require model swapping or runtime sharing; transfer and trust costs must be retained.
Isolation boundary	Performance fairness, memory separation, fault containment and security are different claims.
Deployment environment	GPU generation, compiler, driver hooks, runtime changes and host CPU demand affect applicability.

3 Objectives and research questions

The objective is a traceable conditional recommendation that relates a mechanism to a workload and a sacrifice. The submitted protocol remains unchanged; later deviations are documented separately.

RQ	Review question
RQ1	What time-slicing, MPS, MIG and API remoting mechanisms are evaluated for concurrent inference on one GPU, and how do sharing granularity, layer and isolation boundary classify them?
RQ2	How do studies measure utilization, throughput, density, average/tail latency, predictability and interference, and how comparable are their experimental methods?
RQ3	Under what GPU, workload, batch, tenant mix and configuration conditions are changes in utilization, throughput, density and latency reported?

RQ	Review question
RQ4	What resource and fault isolation properties, trade-offs, implementation costs and conflicting results are reported, and what limits the evidence?
RQ5	Which approach or combination is supported for specified inference-serving conditions and priorities, with what confidence and alternatives?

4 Review methodology

Occurrence, canonical record, report, study and outcome are separate units. Raw exports retain source file, position and hash. Duplicate links alter the canonical screening queue without removing occurrences or earlier votes. Full-text criteria, QA rationales and outcome rows carry report IDs; final unique studies require report-to-study reconciliation.

The present record uses automated first-pass recommendations followed by targeted assessments of accessible sources. Independent reviewer fields have not been populated. This departure from the planned dual-review process is documented separately; no reviewer-agreement statistic is reported. Initial decisions, scores and provenance remain preserved.

The new triage rules exclude only explicit review/non-primary or specified non-GPU-domain signals. Other unresolved metadata is retained as uncertain. This closes first-pass coverage, not full-abstract verification or final eligibility. Accessible conference/author PDFs are assessed in bounded batches and saved with retrieval hashes. A DOI alone does not establish source access or eligibility.

5 Current accounting and review status

Stage	Count / interpretation
Imported occurrences	4189
Applied duplicate links	114 =111 earlier links plus3 publisher-verified identities
Canonical records	4075
First automated recommendations	4075
Preliminary exclusion proposals	1441
Retain or uncertain	2634
Source-assessed reports	17
Assessed full-text exclusions	2; source-assessed EC2 decisions, not complete census
QA/extraction report forms	15; not final studies
Q1-Q10 item rows	150
Outcome rows	45; not study counts
Final included reports/studies	Pending; no numerical final claim

The three applied identity links are HealthServe DOI identity and two DOI-less occurrences whose publisher URLs match DARIS and CRONUS. The removed canonical rows remain in screening_merged_history.csv; all vote events remain in title_votes.csv. Other version or companion proposals remain separate. Source counts are parsed occurrences, not displayed search hits.

6 Protocol and documented deviations

Deviation	Handling / consequence
Attributed IEEE/Springer searches	Shared Group A runs are reused by authorization and attributed; they are not newly executed Group B searches.
ScienceDirect fallback queries	The master expression was rejected; available fallback exports are active. Complete execution of every planned lane is not demonstrated.
Search fields and filters	Executed fields and URL facets govern provenance. Full-text indexing and an open-access temporal filter can change sensitivity and specificity.
Historical count discrepancies	ACM1600displayed/1603claimed exports versus1582parsed numbered exports; ScienceDirect MPS517displayed/563exported remain unresolved.
Review-method amendment	Automated assessment replaced the planned independent dual-review process; initial records are retained.
Version uncertainty	ParvaGPU accessed through arXivv1; final publication equivalence unresolved. REEF companion relationship remains open.
Incomplete final selection	First-pass triage and assessed source slice do not provide final PRISMA stages or final study count.

7 Academic databases and provenance

Source	Occurrences	Linked repeats	Canonical attribution
ACM	1582	30	1552
IEEE	102	9	93
Springer	587	3	584
ScienceDirect	1898	67	1831
Supplementary	20	5	15

ACM, IEEE Xplore, Springer and ScienceDirect are represented in the active imports. Supplementary sources are tracked separately. Cross-database duplicates are attributed to the surviving canonical record; per-source remaining counts are not independent studies. Four represented platforms do not establish a reproducible complete four-database search.

8 Search strategy and executed query tables

The planned expressions are preserved in planned_queries.csv. The following table reproduces the executed or operator-reported query register, including its uncertainty. Displayed hits and exported/parsed occurrences remain distinct. Full filenames and provenance are retained in the workbook search/export logs; unknown historical fields remain unknown.

IEEE-MPS

Field	Executed/register evidence
Platform / status	IEEE Xplore; attributed shared executed search; not rerun by Group B
Exact query	(GPU OR "graphics processing unit") AND (inference OR "model serving" OR "deep learning" OR DNN OR LLM) AND (MPS OR "multi-process service")
Fields / filters	All metadata (Search by All); not field-qualified Command Search; Publication years2020-2026; date/language/type checked during screening
Date / timezone	2026-10-11; time not recorded; timezone unknown
Displayed / claimed exported	25 / 25
Parsed / active	25 / 25
Evidence / gaps	evidence/imports/group-a/imported_records.json; Rendered metadata capture, not publisher export; exact time unavailable; different expressions from submitted protocol; full text indexed scope for Springer

IEEE-MIG

Field	Executed/register evidence
Platform / status	IEEE Xplore; attributed shared executed search; not rerun by Group B
Exact query	(GPU OR "graphics processing unit") AND (inference OR "model serving" OR "deep learning" OR DNN OR LLM) AND (MIG OR "multi-instance GPU" OR "GPU partitioning")
Fields / filters	All metadata (Search by All); not field-qualified Command Search; Publication years2020-2026; date/language/type checked during screening
Date / timezone	2026-10-11; time not recorded; timezone unknown
Displayed / claimed exported	23 / 23
Parsed / active	23 / 23
Evidence / gaps	evidence/imports/group-a/imported_records.json; Rendered metadata capture, not publisher export; exact time unavailable; different expressions from submitted protocol; full text indexed scope for Springer

IEEE-TEMPORAL

Field	Executed/register evidence
Platform / status	IEEE Xplore; attributed shared executed search; not rerun by Group B
Exact query	(GPU OR "graphics processing unit") AND (inference OR "model serving" OR "deep learning" OR DNN OR LLM) AND ("time slicing" OR "time sharing" OR "context switching")

Field	Executed/register evidence
Fields / filters	All metadata (Search by All); not field-qualified Command Search; Publication years2020-2026; date/language/type checked during screening
Date / timezone	2026-10-11; time not recorded; timezone unknown
Displayed / claimed exported	45 / 45
Parsed / active	45 / 45

IEEE-API

Field	Executed/register evidence
Platform / status	IEEE Xplore; attributed shared executed search; not rerun by Group B
Exact query	(GPU OR "graphics processing unit") AND (inference OR "model serving" OR "deep learning" OR DNN OR LLM) AND ("API remoting" OR "CUDA remoting" OR "GPU proxy" OR "GPU virtualization")
Fields / filters	All metadata (Search by All); not field-qualified Command Search; Publication years2020-2026; date/language/type checked during screening
Date / timezone	2026-10-11; time not recorded; timezone unknown
Displayed / claimed exported	9 / 9
Parsed / active	9 / 9
Evidence / gaps	evidence/imports/group-a/imported_records.json; Rendered metadata capture, not publisher export; exact time unavailable; different expressions from submitted protocol; full text indexed scope for Springer

SPR-MASTER

Field	Executed/register evidence
Platform / status	Springer Nature Link; attributed shared executed search; not rerun by Group B
Exact query	(GPU OR "graphics processing unit") AND (inference OR "model serving" OR "deep learning" OR DNN OR LLM) AND ("time slicing" OR "time sharing" OR "context switching" OR MPS OR "multi-process service" OR MIG OR "multi-instance GPU" OR "GPU partitioning" OR "API remoting" OR "CUDA remoting" OR "GPU proxy" OR "GPU virtualization")
Fields / filters	General search/full-text indexed collection; English; Research article OR Conference paper;2020-2026; manual cutoff

Field	Executed/register evidence
Date / timezone	2026-10-11; time not recorded; timezone unknown
Displayed / claimed exported	587 / 587
Parsed / active	587 / 587
Evidence / gaps	evidence/imports/group-a/imported_records.json; Rendered metadata capture, not publisher export; exact time unavailable; different expressions from submitted protocol; full text indexed scope for Springer

ACM-PILOT

Field	Executed/register evidence
Platform / status	ACM Digital Library; attributed shared executed search; not rerun by Group B
Exact query	GPU AND inference AND MPS
Fields / filters	not_validated; not_applied
Date / timezone	2026-10-11; time not recorded; timezone unknown
Displayed / claimed exported	UNKNOWN / 0
Parsed / active	0 / 0
Evidence / gaps	evidence/imports/group-a/imported_records.json; Rendered metadata capture, not publisher export; exact time unavailable; different expressions from submitted protocol; full text indexed scope for Springer

SD-PILOT

Field	Executed/register evidence
Platform / status	ScienceDirect; attributed shared executed search; not rerun by Group B
Exact query	GPU AND inference AND MPS
Fields / filters	not_validated; not_applied
Date / timezone	2026-10-11; time not recorded; timezone unknown
Displayed / claimed exported	UNKNOWN / 0
Parsed / active	0 / 0
Evidence / gaps	evidence/imports/group-a/imported_records.json; Rendered metadata capture, not publisher export; exact time unavailable; different expressions from submitted protocol; full text indexed scope for Springer

SUP-SELECTED

Field	Executed/register evidence
Platform / status	Supplementary public web/venue/author lookup; attributed shared executed search; not rerun by Group B
Exact query	Named-paper lookups and official venue/author retrieval; see supplementary_discovery.csv
Fields / filters	Public metadata/full texts; Same protocol eligibility
Date / timezone	2026-10-11; time not recorded; timezone unknown
Displayed / claimed exported	UNKNOWN / 20
Parsed / active	0 / 0
Evidence / gaps	evidence/imports/group-a/imported_records.json; Rendered metadata capture, not publisher export; exact time unavailable; different expressions from submitted protocol; full text indexed scope for Springer

ACM-MASTER

Field	Executed/register evidence
Platform / status	ACM Digital Library; reported master query; master and numbered exports not fully mapped
Exact query	(GPU OR "graphics processing unit") AND (inference OR "model serving" OR "deep learning" OR DNN OR LLM) AND ("time slicing" OR "time sharing" OR "context switching" OR MPS OR "multi-process service" OR MIG OR "multi-instance GPU" OR "GPU partitioning" OR "API remoting" OR "CUDA remoting" OR "GPU proxy" OR "GPU virtualization")
Fields / filters	All Fields; 2020 - 2026
Date / timezone	2026-10-14 (operator reported); 14 October 2026, 10:30 PM Asia/Karachi
Displayed / claimed exported	1600 / 1603
Parsed / active	1829 / 0
Evidence / gaps	evidence/incoming_shared/acm_master/ACM_MASTER_01.bib;evidence/incoming_shared/acm_master/ACM_MASTER_02.bib; 1600 displayed and 1603 exported claimed; 1829 overlapping master entries with 1387 distinct DOI/title keys; 68 staged unmatched candidates; original 79-file mapping unresolved

SD-TEMPORAL

Field	Executed/register evidence
Platform / status	ScienceDirect; historical operator-reported; partial export reconciliation
Exact query	(GPU OR "graphics processing unit") AND (inference OR "model serving" OR "deep learning") AND ("time slicing" OR "time sharing" OR "context switching")
Fields / filters	Find articles with these terms; 2020 - 2026

Field	Executed/register evidence
Date / timezone	2026-10-14 (operator reported); 14 October 2026, 11:45 PM Asia/Karachi
Displayed / claimed exported	1053 / 1053
Parsed / active	1053 / 1053
Evidence / gaps	evidence/incoming_shared/sciencedirect_2026-10-16/SD_TEMPORAL_01.ris;evidence/incoming_shared/sciencedirect_2026-10-16/SD_TEMPORAL_010.ris;evidence/incoming_shared/sciencedirect_2026-10-16/SD_TEMPORAL_011.ris;evidence/incoming_shared/sciencedirect_2026-10-16/SD_TEMPORAL_02.ris;evidence/incoming_shared/sciencedirect_2026-10-16/SD_TEMPORAL_03.ris;evidence/incoming_shared/sciencedirect_2026-10-16/SD_TEMPORAL_04.ris;evidence/incoming_shared/sciencedirect_2026-10-16/SD_TEMPORAL_05.ris;evidence/incoming_shared/sciencedirect_2026-10-16/SD_TEMPORAL_06.ris;evidence/incoming_shared/sciencedirect_2026-10-16/SD_TEMPORAL_07.ris;evidence/incoming_shared/sciencedirect_2026-10-16/SD_TEMPORAL_08.ris;evidence/incoming_shared/sciencedirect_2026-10-16/SD_TEMPORAL_09.ris; TEMPORAL URL has openaccess facet omitted from filter text; 1053 parsed agrees with reported count; exact pagination and operator unknown

SD-MPS

Field	Executed/register evidence
Platform / status	ScienceDirect; historical operator-reported; partial export reconciliation
Exact query	(GPU OR "graphics processing unit") AND (inference OR "model serving" OR "deep learning") AND (MPS OR "multi-process service")

9 Literature period

The main period is2020 through the actual 2026 search date for each run. Shared logs indicate 11 October 2026; ACM reports 14 October 2026 coverage. Those dates are not treated as one universal cutoff. Later primary-paper retrieval is source assessment, not a claim that an earlier database run covered later publications. Older seminal exceptions require an individually documented justification; they are not silently mixed into the main window.

10 Inclusion and exclusion criteria

IC1-IC6 are conjunctive. At assessed full text, one decisive exclusion reason is recorded in protocol order. A report that has not been retrieved is not an EC6 assessed exclusion.

IC	Required condition
IC1	English peer-reviewed full primary conference/journal report; final source identity checked.
IC2	Evaluated sharing among concurrent tenants/models/processes on one physical GPU, including temporal/hybrid sharing.
IC3	Inference/model serving; mixed workloads need separable inference outcomes.
IC4	Relevant inspectable outcome with interpretable experimental configuration.
IC5	Extractable within-one-GPU evidence and sufficient source detail; multi-GPU scale alone does not exclude.
IC6	Main publication window or a justified older seminal exception.

EC	Decisive exclusion condition
EC1	Non-primary/non-peer-reviewed version, survey, tutorial, editorial, preprint-only or abstract/poster item.
EC2	Training-only or no evaluable concurrent inference-sharing outcome.
EC3	Hardware/microarchitecture-only work without evaluated systems-level sharing.
EC4	Only aggregate cluster/multi-GPU/remote-execution results without extractable local co-tenant evidence.
EC5	Non-GPU accelerator without a relevant evaluated GPU mechanism.
EC6	Assessed full text has insufficient methods/configuration/outcomes for any RQ.
EC7	Outside period without accepted exception or non-English full text.

11 PRISMA 2020 interim accounting

The diagram is interim. Preliminary triage proposals are not final screened exclusions. Reports sought/not retrieved and final eligibility have no complete reconciled census yet. The 17 source-assessed reports comprise two EC2 exclusions and 15 QA/extraction forms. This is a source-assessment slice, not the arithmetic remainder of 2,634 candidates.

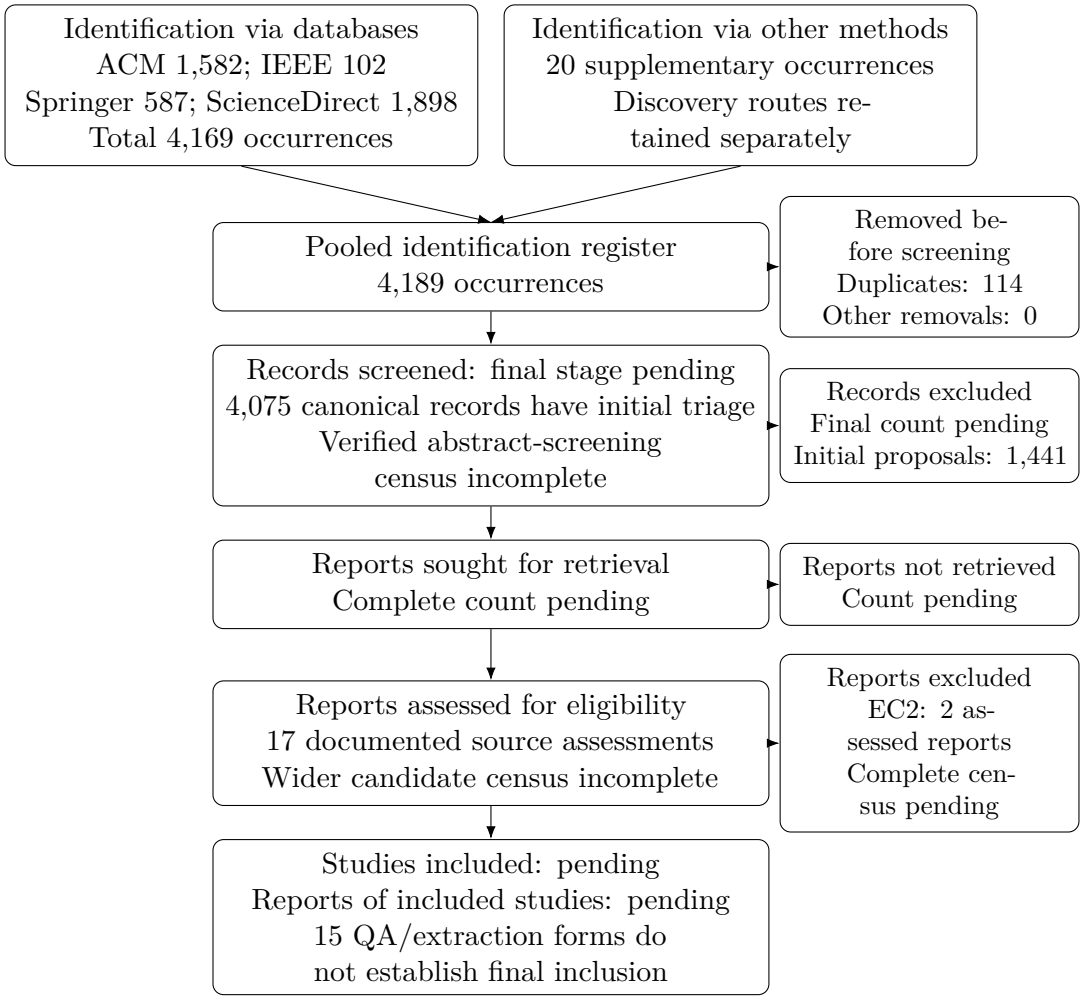

Figure 1: Interim PRISMA 2020 accounting, adapted from Page et al.[5]. Database and supplementary occurrences are pooled before record linkage in this register. Unfinished stages are pending; no preliminary proposal is promoted to a final exclusion.

Report / decision	Source-based reason	Exact anchor
GB-P016 TGS: Transparent GPU Sharing in Container Clouds for Deep Learning Workloads; EC2	Training-focused GPU container sharing; evaluation concerns production/ opportunistic training jobs. Discussion explicitly places inference optimization outside this paper; no separable inference-sharing result identified.	printed p69 abstract; evaluation pp75-80; p81 discussion; PDF pp2,8-14
GB-P017 HiveD: Sharing a GPU Cluster for Deep Learning with Guarantees; EC2	GPU-cluster resource reservation and affinity for deep-learning training; evaluated queueing/completion-time behavior is not concurrent local inference serving. EC2 decisive; aggregate cluster scope is a secondary limitation.	printed p515 abstract; section6 evaluation pp521-525; PDF pp2,8-12

Source-assessed exclusions are TGS and HiveD[7, 8]. These decisions are distinct from initial exclusion proposals.

12 Search, screening, duplicate and abstract logs

The compact workbook carries 4,075 canonical screening rows and the 4,189-occurrence duplicate ledger. Screening rows contain database, year, DOI, first recommendation, reason, report/study links, full-text source/anchor and final status. Record IDs remain stable. The three merged canonical rows and original opinions are retained rather than deleted.

Whitespace/entity normalization was audited for all 4,189 abstract fields without publishing the full text or changing original exports.3,658 occurrences contain some abstract text and531 are blank. Normalization does not verify that a field is a complete abstract; snippets and truncation remain possible. The audit records character counts and source hashes rather than treating empty or incomplete text as a scientific finding.

13 Quality assessment

Group B uses ten 0-2 criteria. A reasoned N/A removes its maximum from the denominator. Below 60 percent is a sensitivity view, not an exclusion gate. All 15 assessed forms have ten item rows; none is converted to human-validated appraisal. The separate QA document supplies every rationale, anchor, assessor and remaining check.

Report	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Q10	Total
GB-P001	2	2	1	1	1	2	NA	2	1	1	13/18
GB-P002	2	2	2	1	1	2	2	2	1	2	17/20
GB-P003	2	2	2	2	2	2	2	2	1	1	18/20
GB-P004	2	2	2	1	2	2	2	2	1	1	17/20
GB-P005	2	2	1	2	2	2	1	2	1	2	17/20
GB-P006	2	2	1	2	1	2	2	2	NA	2	16/18
GB-P007	2	2	2	2	1	2	2	2	2	2	19/20
GB-P008	2	2	1	2	2	2	1	2	2	1	17/20
GB-P009	2	2	1	1	1	2	2	2	1	2	16/20

Report	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Q10	Total
GB-P010	2	2	1	2	1	2	2	2	1	2	17/20
GB-P011	2	2	1	1	1	2	1	2	1	1	14/20
GB-P012	2	2	1	1	1	2	2	2	1	1	15/20
GB-P013	2	2	1	1	1	2	1	2	1	2	15/20
GB-P014	2	2	1	2	1	2	2	2	1	1	16/20
GB-P015	2	2	1	1	2	2	2	2	NA	2	16/18

Provisional N/A judgments are VastPipe Q7, Paella Q9 and XSched Q9. Claim-specific applicability and the planned calibration remain open. Twenty legacy items have section/ figure anchors without original printed-page mapping; additional section-only anchors remain visible in QA follow-up. Current first scores produce no below 60 percent forms, but incomplete eligibility/version checks prevent a strong robustness claim.

14 Topic-specific extraction and study identities

The compact summary below links each report to its mechanism, hardware and assessment status. The separate data-extraction document and workbook retain full study forms and all 45 outcome rows. Every reported metric has a value/unit, workload, comparator and anchor. Two additional calculations retain explicit formulas and inputs and remain separate from reported measurements. Unknown fields are not extracted; a not-reported label is scoped to the source section actually checked.

Workload / conditions	GoogLeNet,LeNet,ResNet50,SSD-MobileNet,VGG16,MnasNet,MobileNetv2,DenseNet,BaseBERT (Table3); paired local inferences; system scenarios contain several models; Poisson inter-arrivals; model SLO5-202ms;99% requests within SLO; median of3 runs (pp207-208)
Comparator	Solo latency for local Fig7; SBP and greedy best-fit for system scheduling
Eligibility / source	provisionally_eligible; pp201-203 local mechanism/Fig7; p207 Tables2-3;pp208-209 system methodology

GB-P004 PipeSwitch

[12]

Dimension	Source-linked extraction
Identity	Zhihao Bai;Zhen Zhang;Yibo Zhu;Xin Jin; 2020; USENIX OSDI20
Mechanism / GPU	Temporal task switching; pipelined model transfer; active/standby workers and shared memory daemon; V10016GB PCIe3x16;T416GB PCIe3x8
Workload / conditions	ResNet152;Inception_v3;Bert_base; one training task preempted for one inference task; separable inference latency; training32;inference8;100-run averages;Fig6 reports minimum/ maximum (p508)
Comparator	Ready model;stop-and-start;MPS using unified memory
Eligibility / source	provisionally_eligible; p508 section6/6.1; p509 Tables3-4

GB-P005 REEF conference

[13]

Dimension	Source-linked extraction
Identity	Mingcong Han;Hanze Zhang;Rong Chen;Haibo Chen; 2022; USENIX OSDI22
Mechanism / GPU	Reset-based preemption;idempotent inference kernels;dynamic kernel padding;runtime/driver changes; AMD Radeon Instinct MI50:60CUs/ 16GB;REEF-N extension NVIDIA V100
Workload / conditions	ResNet152;DenseNet201;VGG19;Inceptionv3;DistilBERT; DISB A/B: 1RT+1BE;C:1RT+5BE;D/E:5RT+5BE; Table2 RT100/220/100/20/ 20req/s;D uniform,E Poisson;BE closed-loop;batch not extracted
Comparator	RT-Only;SEQ;GPUStreams;separate wait-based preemption microbenchmark
Eligibility / source	eligible_companion_candidate; p548 section7.1 Table2;p549 section7.2 Fig11;section8 idempotence limitation

GB-P006 Paella: Low-latency Model Serving with Software-defined GPU Scheduling

[14]

Dimension	Source-linked extraction
Identity	Kelvin K.W. Ng; Henri Maxime Demoulin; Vincent Liu; 2023; SOSP 2023
Mechanism / GPU	Instrumented kernels; software scheduling; Tesla T4
Workload / conditions	Mixed inference; lognormal arrivals sigma1.5/2; Mixed inference; lognormal arrivals sigma1.5/2; not extracted
Comparator	CUDA-MS;Triton23.03;Paella ablations
Eligibility / source	provisionally_eligible;study_identity_provisional; printed pp604-606; PDF pp10-12; sections7.1-7.3

GB-P007 Orion: Interference-aware, Fine-grained GPU Sharing for ML Applications

[15]

Dimension	Source-linked extraction
Identity	Foteini Strati; Xianzhe Ma; Ana Klimovic; 2024; EuroSys 2024
Mechanism / GPU	Interception; interference-aware kernel scheduling; V10016GB;A10040GB extension
Workload / conditions	High-priority plus best-effort inference;Poisson; High-priority plus best-effort inference;Poisson; not extracted
Comparator	Dedicated high-priority GPU;MPS;Streams;REEF-N policy
Eligibility / source	provisionally_eligible;study_identity_provisional; printed pp1082-1087; PDF pp8-13; sections6-7

GB-P008 GSLICE: Controlled Spatial Sharing of GPUs for a Scalable Inference Platform

[16]

Dimension	Source-linked extraction
Identity	Aditya Dhakal; Sameer G Kulkarni; K.K. Ramakrishnan; 2020; SoCC 2020
Mechanism / GPU	MPS allocation; adaptive batching; One V10016GB
Workload / conditions	Concurrent inference functions;25ms target; Concurrent inference functions;25ms target; not extracted
Comparator	Default MPS;MPS+SLAB;TensorRT19.02
Eligibility / source	provisionally_eligible;study_identity_provisional; printed pp499-501; PDF pp8-10; sections4.1-4.3

GB-P009 Serving DNNs like Clockwork: Performance Predictability from the Bottom Up

[17]

Dimension	Source-linked extraction
Identity	Arpan Gujarati; Reza Karimi; Safya Alzayat; Wei Hao; Antoine Kaufmann; Ymir Vigfusson; Jonathan Mace; 2020; USENIX OSDI 2020
Mechanism / GPU	Predictable temporal scheduling; One V10032GB in section6.1
Workload / conditions	15 ResNet50 instances;16 closed-loop clients/model; 15 ResNet50 instances;16 closed-loop clients/model; not extracted
Comparator	Clipper;INFaaS (different EC2 hardware)
Eligibility / source	provisionally_eligible;study_identity_provisional; printed pp451-452; author PDF pp9-10; section6.1/Fig5

GB-P010 Colocating ML Inference and Training with Fast GPU Memory Handover (SIRIUS)

[18]

Dimension	Source-linked extraction
Identity	Jiali Wang; Yankui Wang; Mingcong Han; Rong Chen; 2025; USENIX ATC2025, pp1657-1675
Mechanism / GPU	hybrid spatial sharing; CUDA VMM memory handover and dynamic SM masking; separate inference/training runtimes; single NVIDIA Tesla V100 16GB in section6.1; four-V100 host; separate section6.6 single A100 80GB LLM experiment

Dimension	Source-linked extraction
Workload / conditions	ResNet152 319MB; DenseNet169 84MB; EfficientNetV2-s86MB; EfficientViT-b2 109MB; DistilBERT254MB; DistilGPT2 317MB; Swin-T training; section6.6 Llama2-13B26GB with Qwen2-0.5B training; six inference models duplicated round-robin to56 instances; co-located Swin-T training, batch72; Light/Heavy/Burst/Skewed and compressed Azure Functions traces; 300s runs; SLO=4x standalone inference execution; Tidle5s, watermark1GB
Comparator	TaskSwitch implemented by authors, not vanilla PipeSwitch; SP-50/ SP-75 static memory; UM+MPS; Infer-Only
Eligibility / source	provisionally_eligible_AI_source_assessment; printed pp1665-1666, section6/6.1, Table3, Figure10; PDF pp10-11 (includes cover)

GB-P011 ParvaGPU: Efficient Spatial GPU Sharing for Large-Scale DNN Inference in Cloud Environments

[19]

Dimension	Source-linked extraction
Identity	Munkyu Lee; Sihoon Seong; Minki Kang; Jihyuk Lee; Gap-Joo Na; In-Geol Chun; Dimitrios Nikolopoulos; Cheol-Ho Hong; 2024; SC2024 identity; extracted text is arXiv2409.14447v1
Mechanism / GPU	hybrid MIG+MPS; MPS processes within a MIG segment; profiler/ configurator plus fleet allocator; A10080GB; Amazon p4de.24xlarge hosts with8 GPUs; extracted profiler point concerns one MIG segment
Workload / conditions	11 DNN workloads overall; local extracted example InceptionV3; one to three homogeneous MPS processes within a MIG instance; other models can occupy separate segments; extracted example:1-GPC MIG instance; batch4;1/2/3 MPS processes; no tail quantile identified for local latency
Comparator	same InceptionV3/MIG/batch at1 MPS process versus2/3; fleet baselines not used for local effect
Eligibility / source	uncertain_publication_version;technical_scope_supported; author preprint PDF pp4-5 Figures3-4; p8 experimental environment

GB-P012 Torpor: GPU-Enabled Serverless Computing for Low-Latency, Resource-Efficient Inference

[20]

Dimension	Source-linked extraction
Identity	Minchen Yu; Ao Wang; Dong Chen; Haoxuan Yu; Xiaonan Luo; Zhuohao Li; Wei Wang; Ruichuan Chen; Dapeng Nie; Haoran Yang; Yu Ding; 2025; USENIX ATC2025 pp597-612

Dimension	Source-linked extraction
Mechanism / GPU	API redirection/remoting plus temporal request-level sharing and host/GPU model swapping; GPU runtime sharing mode; single V10032GB in local Figure8; evaluation worker has4 V10032GB GPUs
Workload / conditions	ResNet152 local sharing test;8 models in Table4 including DenseNet169/201,InceptionV3,EfficientNet,ResNet50/101/152,Bert-qa; multiple low-frequency ResNet152 functions share one GPU; sufficient functions to saturate device memory; 10-80 requests/minute/function; global defaultP98; CV deadline80ms and Bert-qa200ms
Comparator	Native early binding; local remoting microbenchmark also compares GVirtuS; cluster INFless-KA results kept separate
Eligibility / source	provisionally_eligible_AI_source_assessment; pp604-606 sections7.1-7.2, Table4, Figure8; PDF pp9-11

GB-P013 StreamBox: A Lightweight GPU SandBox for Serverless Inference Workflow

[21]

Dimension	Source-linked extraction
Identity	Hao Wu; Yue Yu; Junxiao Deng; Shadi Ibrahim; Song Wu; Hao Fan; Ziyue Cheng; Hai Jin; 2024; USENIX ATC2024 pp59-73
Mechanism / GPU	API forwarding into workflow-shared CUDA runtime/streams; PTB software spatial partitioning and fine-grained memory pool; V10016GB,80CUs; host has4 GPUs; single-GPU multi-user test in section9.4
Workload / conditions	Image Processing,Traffic,Social Media workflows: SSD300,FSRCNN,ResNet152/50/18,VGG16,AlexNet,LSTM,BERT; concurrent functions within workflow share runtime; separate3/6-user Traffic test on one GPU; Azure Functions7-day invocation trace; sporadic/periodic/bursty; Traffic SLO200ms; up to3 workflows/runtime contexts per GPU in evaluated setup
Comparator	INFless and Astraea with MPS; Stream-only; all warm-up/model-sharing/pipelined-loading settings disclosed in section9
Eligibility / source	provisionally_eligible_AI_source_assessment; pp67-70 sections9.1-9.4; Figures12-14,19; PDF pp10-13

GB-P014 Efficient Performance-Aware GPU Sharing with Compatibility and Isolation through Kernel Space Interception (KRYPTON)

[22]

Dimension	Source-linked extraction
Identity	Shulai Zhang; Ao Xu; Quan Chen; Han Zhao; Weihao Cui; Zhen Wang; Yan Li; Limin Xiao; Minyi Guo; 2025; USENIX ATC2025 pp1003-1019

Dimension	Source-linked extraction
Mechanism / GPU	kernel-command-buffer interception; feedback-controlled temporal quotas and MIG spatial orchestration; Linux loadable module; A10040GB for local quota/QoS tests; twoRTX4090 used for separate distributed-training test
Workload / conditions	local Transformer-XL inference batch8/16/32;ResNet50/ MobileNetV2/BERT-Large also benchmarked; inference with co-running applications; separate training/rendering results not substituted; QoS:Poisson arrivals at half maximum throughput;50%temporal allocation;5/10/20/40/80ms tokens; target original soloP99
Comparator	original soloP99 QoS target; fixed temporal quotas; adapted MIG baselines used separately for fleet packing
Eligibility / source	provisionally_eligible_AI_source_assessment; pp1011-1015 sections5.1,5.5-5.7,7; PDF pp10-14

GB-P015 XSched: Preemptive Scheduling for Diverse XPUs

[23]

Dimension	Source-linked extraction
Identity	Weihang Shen; Mingcong Han; Jialong Liu; Rong Chen; Haibo Chen; 2025; USENIX OSDI2025 pp671-692
Mechanism / GPU	temporal/preemptive runtime interposition via XQueue/XShim; hardware-specific preemption levels; single NVIDIA GV100 for extracted Triton/Paella case; NPU/ASIC/FPGA results outside extracted GPU outcomes
Workload / conditions	two Bert-large model clients for Triton; Paella mixed-model request workload for second case; one high-priority client at10requests/ s;low-priority client continuous on sameGV100; Triton client rates as above;Paella workload lognormal sigma2.0;K-EDF K16; exact batch sizes not reported in extracted case3
Comparator	vanilla Triton;Triton priority setting;standalone high-priority execution;separate comparison to Paella
Eligibility / source	provisionally_eligible_AI_source_assessment; p683 section7.4 case3/ Figure15; PDF p14

A Reading the complete research tables

The appendices reproduce the research data used by the accompanying workbook and the additional evidence registers. Report IDs join quality, eligibility and extraction records. Outcome rows are measurements, not studies. Blank cells remain blank. Long repeated values in large logs are represented by V-codes; the complete value glossary preserves their content. Whitespace and typographic punctuation are normalized for print; CSVs preserve the original strings. The editable CSV files retain their unabridged values. This is reversible display compression, not a change to the evidence.

The paper count in plain English

The quality and extraction tables cover the same fifteen report IDs, GB-P001 to GB-P015. Thirteen reports are provisionally eligible; REEF retains a companion-report question and ParvaGPU retains a publication-version question. TGS and HiveD are separately assessed exclusions, GB-P016 and GB-P017. The bibliography contains fifteen assessed-paper references, two excluded-paper references and six context or methods references. Its entry count is not a count of included studies.

Progress measures

Initial triage covers 4,075/4,075 records (100%). Source assessments are linked to 17/2,634 initial retain/uncertain candidates (0.65%). All fifteen existing assessment forms have ten quality items and one extraction form; this does not establish complete extraction of every field or completion of the full candidate queue. There is no defensible overall assignment-completion or marks percentage from these counts.

B Complete workbook and supporting research tables

B.1 Workbook summary

Source table: 14 rows; 2 fields. Stable first-column keys are repeated across horizontal panels.

Table 39: Workbook summary: panel 1/1

B.7 FT exclusions

Source table: 2 rows; 10 fields. Stable first-column keys are repeated across horizontal panels.

Table 58: FT exclusions: panel 1/3

report id	record id	title	criterion	reason
GB-P016	GB-R02285	TGS: Transparent GPU Sharing in Container Clouds for Deep Learning Workloads	EC2	Training-focused GPU container sharing; evaluation concerns produc tion/opportunistic training jobs. Discussion explicitly places inference optimization outside this paper; no separable inference-sharing result identified.
GB-P017	GB-R02286	HiveD: Sharing a GPU Cluster for Deep Learning with Guarantees	EC2	GPU-cluster resource reservation and affinity for deep-learning training; evaluated queueing/completion-time behavior is not concurrent local inference serving. EC2 decisive; aggregate cluster scope is a secondary limitation.

B.8 QA items

Source table: 150 rows; 15 fields. Stable first-column keys are repeated across horizontal panels.

Table 61: QA items: panel 1/4

report id	criterion	score	maximum	rationale
GB-P001	Q1	2	2	Objective and local GPU portability question explicit
GB-P001	Q2	2	2	Tuned MPS quotas and CU masking described
GB-P001	Q3	1	2	GPU-specific repeats and variance unresolved in conversion
GB-P001	Q4	1	2	GPU/backend named; precise GPU loads and versions incomplete
GB-P001	Q5	1	2	Same hardware and no/default/tuned MPS; quotas incomplete
GB-P001	Q6	2	2	Throughput ratios and baseline named in prose
GB-P001	Q7	NA	0	GPU-portability extraction makes no latency claim; do not score NPU latency as GPU evidence
GB-P001	Q8	2	2	Multiple named co-located inference pairs evaluated
GB-P001	Q9	1	2	Performance interference considered; no separate security/fault validation extracted
GB-P001	Q10	1	2	Stable-mix Q-table constraint; GPU replication settings incomplete
GB-P002	Q1	2	2	Interference-aware inference provisioning objective explicit
GB-P002	Q2	2	2	MPS allocation and shadow implementation described
GB-P002	Q3	2	2	Model checks repeated three times with SD; metric windows specified
GB-P002	Q4	1	2	GPU/workloads/backend detailed; OS/driver unresolved
GB-P002	Q5	1	2	Adapted baselines and allocation/batch differences disclosed
GB-P002	Q6	2	2	Cost, throughput, resource-allocation metrics distinguished
GB-P002	Q7	2	2	P99 windows, SLO and recovery timing explicit
GB-P002	Q8	2	2	Four co-located models and quota configuration specified
GB-P002	Q9	1	2	Performance interference measured; security/fault boundaries not tested in checked portion
GB-P002	Q10	2	2	Code, prediction limitations and PCIe caveat explicit
GB-P003	Q1	2	2	Clear SLO-aware co-location objective
GB-P003	Q2	2	2	MPS partitions and temporal batching described
GB-P003	Q3	2	2	Poisson requests;median of3 repeats;throughput/SLO procedure
GB-P003	Q4	2	2	Full GPU/CPU/OS/driver/runtime and model tables
GB-P003	Q5	2	2	Ported SBP comparator and Nexus incompatibility justified
GB-P003	Q6	2	2	Maximum throughput with99%SLO definition;system scale explicit
GB-P003	Q7	2	2	SLO99% procedure;local overhead CDF population explicit
GB-P003	Q8	2	2	Paired model interference and scheduler interference comparison
GB-P003	Q9	1	2	Performance interference checked;security/fault boundary not extracted
GB-P003	Q10	1	2	Prototype and appendix setup available;replication not attempted
GB-P004	Q1	2	2	Fine-grained task-switching problem and design explicit
GB-P004	Q2	2	2	Controller,memory daemon,workers and pipeline described
GB-P004	Q3	2	2	100-run mean;min/max forFig6;setup described

Continued on next page

report id	criterion	score	maximum	rationale
GB-P004	Q4	1	2	Hardware/software specified;OS/kernel/driver not extracted
GB-P004	Q5	2	2	Same modified PyTorch;ready-model and swapping conditions explicit
GB-P004	Q6	2	2	Inference throughput and utilization denominator defined
GB-P004	Q7	2	2	End-to-end overhead defined;mean and extrema identified
GB-P004	Q8	2	2	Training/inference co-location;inference metric separated
GB-P004	Q9	1	2	Process/memory control described;security/fault testing not extracted
GB-P004	Q10	1	2	Versioned stack described;limitations documented;replication not attempted
GB-P005	Q1	2	2	Concurrent real-time/best-effort inference objective explicit
GB-P005	Q2	2	2	Reset preemption,queues and padding implementation described
GB-P005	Q3	1	2	Benchmark arrivals and baseline methods detailed;repeat/variance protocol not extracted
GB-P005	Q4	2	2	CPU,GPU,host RAM,OS,runtime,models andclients specified
GB-P005	Q5	2	2	RT-only and GPUStreams/SEQ conditions;extensions disclosed
GB-P005	Q6	2	2	Total RT+BE throughput and denominator explicit
GB-P005	Q7	1	2	End-to-end latency and load specified;request percentile not extracted
GB-P005	Q8	2	2	MultipleRT/BE clients and multiple mixes directly tested
GB-P005	Q9	1	2	Performance isolation tested;no extracted memory/security/fault boundary test
GB-P005	Q10	2	2	Artifact and idempotence/platform limitations explicit
GB-P006	Q1	2	2	Explicit goal
GB-P006	Q2	2	2	Mechanism classifiable
GB-P006	Q3	1	2	Repetition count unclear
GB-P006	Q4	2	2	Versioned setup
GB-P006	Q5	1	2	Wrapper caveat
GB-P006	Q6	2	2	Defined throughput
GB-P006	Q7	2	2	p99 specified
GB-P006	Q8	2	2	Mixed jobs tested
GB-P006	Q9	NA	0	No security/fault or resource-isolation guarantee appraised; fairness is assessed under Q8; N/A provis ional
GB-P006	Q10	2	2	Artifact and limits
GB-P007	Q1	2	2	Explicit goal
GB-P007	Q2	2	2	Interception specified
GB-P007	Q3	2	2	Three repetitions
GB-P007	Q4	2	2	Versioned setup
GB-P007	Q5	1	2	Reimplemented comparator
GB-P007	Q6	2	2	Defined aggregate metric
GB-P007	Q7	2	2	p99 and arrivals
GB-P007	Q8	2	2	Collocations tested
GB-P007	Q9	2	2	Trust boundary explicit
GB-P007	Q10	2	2	Artifact and limitations
GB-P008	Q1	2	2	Explicit goal

Continued on next page

report id	criterion	score	maximum	rationale
GB-P008	Q2	2	2	Sharing described
GB-P008	Q3	1	2	Confidence intervals; counts unclear
GB-P008	Q4	2	2	Hardware and OS
GB-P008	Q5	2	2	Comparator scope stated
GB-P008	Q6	2	2	GUE defined
GB-P008	Q7	1	2	Tail statistic unclear
GB-P008	Q8	2	2	Concurrent functions
GB-P008	Q9	2	2	Fixed quotas and performance-isolation tests; no stronger security claim inferred
GB-P008	Q10	1	2	Reproduction incomplete
GB-P009	Q1	2	2	Explicit goal
GB-P009	Q2	2	2	Scheduling described
GB-P009	Q3	1	2	Repetition count unclear
GB-P009	Q4	1	2	Versions not extracted
GB-P009	Q5	1	2	Hardware mismatch disclosed
GB-P009	Q6	2	2	Goodput defined
GB-P009	Q7	2	2	SLO and CDF
GB-P009	Q8	2	2	Contending models
GB-P009	Q9	1	2	No fault guarantee
GB-P009	Q10	2	2	Artifact and limits
GB-P010	Q1	2	2	Inference/training colocation objective and scope explicit.
GB-P010	Q2	2	2	VMM pool, memory handover and SM-mask control described.
GB-P010	Q3	1	2	Trace distributions and300s windows described; repeated-run uncertainty not established in checked evaluation.
GB-P010	Q4	2	2	GPU, CPU/RAM, software and model sizes specified.
GB-P010	Q5	1	2	TaskSwitch is an adapted implementation; baseline choices explicit but implementation equivalence remains limited.
GB-P010	Q6	2	2	Training samples/s is defined; inference latency/SLO are kept distinct.
GB-P010	Q7	2	2	P99, request arrivals, window and SLO definition supplied.
GB-P010	Q8	2	2	Co-located inference/training traces tested on one GPU.
GB-P010	Q9	1	2	Memory-reclamation boundary described; stronger fault/security validation not established.
GB-P010	Q10	2	2	Detailed implementation and evaluated artifact supplied; scope limitations discussed.
GB-P011	Q1	2	2	Clear inference resource-sharing objective.
GB-P011	Q2	2	2	MIG/MPS segments and algorithms explained.
GB-P011	Q3	1	2	Profiling procedure and fleet scenarios described; repetition/uncertainty reporting unclear.
GB-P011	Q4	1	2	Hardware/workload described; runtime version1.14.0 is printed but needs verification.
GB-P011	Q5	1	2	Local process comparison interpretable; fleet baselines adapted and no final-version equivalence establ ished.
GB-P011	Q6	2	2	Throughput axes specify requests/s and exact local values are given.
GB-P011	Q7	1	2	Latency milliseconds and settings stated; profiler quantile unclear.

Continued on next page

report id	criterion	score	maximum	rationale
GB-P011	Q8	2	2	Concurrent MPS process counts evaluated inside one MIG segment.
GB-P011	Q9	1	2	MIG boundary described; no direct security/fault validation established.
GB-P011	Q10	1	2	Algorithms/settings detailed; accessed version remains preprint and replication verification incomplete.
GB-P012	Q1	2	2	Inference memory/density objective explicit.
GB-P012	Q2	2	2	API redirection, pooling and scheduling described.
GB-P012	Q3	1	2	Production trace and request rates given; repeated-run uncertainty not established.
GB-P012	Q4	1	2	GPU/CPU/RAM supplied; exact software version matrix missing in checked setup.
GB-P012	Q5	1	2	Native and adapted INFless-KA comparison described; resource/CPU paths differ.
GB-P012	Q6	2	2	Throughput/load definitions and local normalization supplied.
GB-P012	Q7	2	2	P98 and per-function load/SLO explicit.
GB-P012	Q8	2	2	Multiple functions share a single GPU in Figure8.
GB-P012	Q9	1	2	Sharing/isolation modes separated; strong security/fault tests not established for evaluated mode.
GB-P012	Q10	1	2	Implementation detail and limitations supplied; independent artifact reproduction unperformed.
GB-P013	Q1	2	2	Workflow-local runtime sharing objective explicit.
GB-P013	Q2	2	2	Streams,PTB compiler and memory management explained.
GB-P013	Q3	1	2	Production-style traces and ablations provided; repeated-run uncertainty unclear.
GB-P013	Q4	1	2	Hardware/frameworks named; OS/driver and version compatibility need checking.
GB-P013	Q5	1	2	Common optimizations enabled, but baselines adapted and batch choices affect ratios.
GB-P013	Q6	2	2	Memory and throughput units/ratios defined.
GB-P013	Q7	1	2	CDF/SLO reported; no precise tail scalar extracted.
GB-P013	Q8	2	2	Explicit3/6-user single-GPU test.
GB-P013	Q9	1	2	Same-runtime sharing weakens function isolation; security boundary is deliberately scoped.
GB-P013	Q10	2	2	Detailed implementation, preparation overhead and multi-user limits supplied.
GB-P014	Q1	2	2	Sharing/isolation/compatibility objectives explicit.
GB-P014	Q2	2	2	Kernel interception,token control and MIG orchestration described.
GB-P014	Q3	1	2	Setup and workload matrix supplied; repeated-run uncertainty unclear.
GB-P014	Q4	2	2	Hardware,OS,kernel,driver and frameworks specified.
GB-P014	Q5	1	2	Isolation-capable baselines and adapters disclosed; equivalence limited.
GB-P014	Q6	2	2	Quota/throughput metrics explicitly normalized.
GB-P014	Q7	2	2	QoS uses originalP99 and defined Poisson load/token lengths.
GB-P014	Q8	2	2	Local co-running inference error measured.
GB-P014	Q9	1	2	Boundary/security rationale described; direct fault/security validation not established in checked evaluation.
GB-P014	Q10	1	2	Implementation andMIGlimitations supplied; independent artifact reproduction unperformed.
GB-P015	Q1	2	2	Portable scheduling objective andGPUcase clear.
GB-P015	Q2	2	2	XQueue abstraction andmulti-level preemption described.
GB-P015	Q3	1	2	Workload rates and policies explicit; repeat uncertainty not established.
GB-P015	Q4	1	2	GPU/model/rates explicit;host/software versions incomplete in extracted case.
GB-P015	Q5	2	2	Same-GPU standalone/native priority comparisons supplied.

B.11 Calculations

Source table: 2 rows; 9 fields. Stable first-column keys are repeated across horizontal panels.

Table 79: Calculations: panel 1/2

calculation id	report id	metric	formula	inputs
GB-CALC001	GB-P011	Local throughput increase	(446/ 354-1)*100	446requests/s at3processes;354requests/s at1process;InceptionV3,1-GPC,batch4
GB-CALC002	GB-P011	Local latency factor	27/11	27ms at3processes;11ms at1process;same1-GPC/batch4configuration

Table 80: Calculations: panel 2/2

calculation id	calculated value	unit	source anchor	status
GB-CALC001	25.988700564971758	percent	ParvaGPU arXivv1 PDF p5 sectionIII-B/Figure3	calculated,not reported;publication-version pending
GB-CALC002	2.4545454545454546	x	ParvaGPU arXivv1 PDF p5 sectionIII-B/Figure4	calculated,not reported;quantile unspecified;version pending

B.12 Review issues

Source table: 8 rows; 4 fields. Stable first-column keys are repeated across horizontal panels.

Table 81: Review issues: panel 1/1

issue	status	scope	action
Selection coverage	open	2634 initial retain/uncertain records; 17 source-assessed reports, including 2 EC2 exclusions; final included studies pending	Complete source eligibility assessment; do not infer final study count from report forms.
Reviewer method	documented deviation	AI-only continuation authorized; human second fields blank	Disclose method and avoid claiming independent consensus.
ParvaGPU version	open	GB-P011 uses arXivv1; conference DOI identity recorded	Verify final publication text before included-study designation.
REEF identity	open	GB-P005 conference versus later journal companion	Map reports to study; do not substitute journal DOI.
Missingness	explicit	Unknown fields labelled not_extracted; absent reporting scoped to checked sections	Do not turn missing values into zeros or unqualified not_reported.
Search gaps	open	ACM79-file mapping;1600/1603 reported versus1582 imported;ScienceDirect MPS517displayed versus563exported	Keep both operator-reported and parsed counts; do not force agreement.
Duplicate reconciliation	applied	111 earlier links plus3 publisher-verified identity links=114	Preserve removed canonical screening rows and all vote events.
Abstract cleaning	normalization audit complete; completeness not verified	3658/4189 occurrences have some abstract text	Originals preserved; whitespace/entity normalization does not establish complete abstracts.

B.13 Reference audit

Source table: 23 rows; 10 fields. Stable first-column keys are repeated across horizontal panels.

Table 82: Reference audit: panel 1/3

B.15 Database statistics

Source table: 5 rows; 4 fields. Stable first-column keys are repeated across horizontal panels.

Table 87: Database statistics: panel 1/1

database	imported occurrences	linked repeats attributed	canonical records
ACM	1582	30	1552
IEEE	102	9	93
Springer	587	3	584
ScienceDirect	1898	67	1831
Supplementary	20	5	15

B.16 Selection statistics

Source table: 19 rows; 3 fields. Stable first-column keys are repeated across horizontal panels.

Table 88: Selection statistics: panel 1/1

stage	count	meaning
Imported occurrences	4189	Four databases4169 plus supplementary20
Applied duplicate links	114	Occurrences remain preserved
Canonical records	4075	4189-114
Initial automated recommendations	4075	Not complete abstract verification
Preliminary exclusion proposals	1441	Not final screened exclusions
Retain or uncertain after initial triage	2634	Not all eligible
Awaiting first automated recommendation	0	Does not imply completed screening
Source-assessed reports	17	Bounded source-assessment slice
Provisionally eligible reports	13	Not final unique studies
Companion candidate reports	1	REEF study/report relationship open
Publication-version-uncertain reports	1	ParvaGPU accessed arXiv version
Assessed full-text EC2 exclusions	2	TGS and HiveD; incomplete exclusion census
QA and extraction forms	15	13provisional plus2unresolved cases
Q1-Q10 item rows	150	Ten items per form
Reported outcome rows	45	Not45papers
Separate calculated outcomes	2	Not author-reported measurements
Unassessed canonical retain/uncertain records	2617	No linked source assessment
Independent human votes recorded	0	AI-only deviation disclosed
Final included reports/studies	Pending	Not established; do not substitute15forms

B.17 Discrepancy ledger

Source table: 8 rows; 5 fields. Stable first-column keys are repeated across horizontal panels.

Table 89: Discrepancy ledger: panel 1/1

issue id	scope	evidence	handling	status
D01	ACM totals	1600 displayed;1603 claimed exports;1582 parsed numbered-export occurrences	Historical cause unknown; use1582active parsed occurrences; preserve all reported counts	open/disclosed
D02	ACM export mapping	79numbered exports lack complete per-run mapping	Keep query/field/filter/time gaps explicit; do not reconstruct operator actions	open/disclosed
D03	ScienceDirect MPS	517displayed versus563exported/parsed	Cause unresolved; retain both numbers and parsed active import	open/disclosed
D04	ParvaGPU version	Conference DOI identified; accessed arXiv report used for extraction	Final-publication text equivalence pending; do not mark final included	open/disclosed
D05	REEF identity	Conference report versus journal companion	Reconcile report-to-study relationship; no DOI substitution	open/disclosed
D06	Selection census	2634initial retain/uncertain versus17source-assessed reports	2617canonical candidates lack linked source assessment; final flow pending	open/disclosed
D07	Screening event times	798missing exact event timestamps; all4075dates recoverable from existing events	Keep exact times Not recorded; metadata-check timestamps are not review timestamps	open/disclosed
D08	QA follow-up	23section/figure-only anchors and3provisional N/A judgments	Keep limitations/calibration pending; no automatic below60% exclusion	open/disclosed

B.18 PRISMA accounting

Source table: 15 rows; 3 fields. Stable first-column keys are repeated across horizontal panels.

Table 90: PRISMA accounting: panel 1/1

stage	count	interpretation
Database occurrences	4169	Parsed occurrence count
Supplementary occurrences	20	Separate discovery routes
All occurrences	4189	Identification occurrences; not studies
Applied duplicate links	114	Ledger-applied occurrences
Canonical records	4075	Record screening queue
Initial automated triage	4075	Not completed verified abstract screening
Initial exclude proposals	1441	Not final screened exclusions
Initial retain/uncertain	2634	Not eligible-study count
Reports sought	Pending	No complete retrieval census
Reports not retrieved	Pending	Do not infer from access-attempt count
Known source-assessed reports	17	Bounded assessed slice; incomplete retrieval census
Assessed EC2 exclusions	2	Known source decisions; complete exclusion census pending

B.20 QA checklist

Source table: 10 rows; 6 fields. Stable first-column keys are repeated across horizontal panels.

Table 94: QA checklist: panel 1/2

criterion	label	score 2 requires	score 1	score 0
Q1	Clarity of objective	Problem, proposed mechanism and evaluated questions are clear.	Partly addressed	Absent or unclear
Q2	Technical description	Sharing primitive, configuration and implementation layer permit classification.	Partly addressed	Absent or unclear
Q3	Experimental transparency	Setup, measurement procedure, repetitions or analytical method and result provenance are clear.	Partly addressed	Absent or unclear
Q4	Hardware/workload description	GPU model/generation, software and concurrent inference workload/tenant characteristics are reported.	Partly addressed	Absent or unclear
Q5	Baseline fairness	Relevant baseline and comparable workload, resources and measurements are documented or justified.	Partly addressed	Absent or unclear
Q6	Utilization/throughput	Claimed benefit has defined metric, unit and method; otherwise alternate outcome is explained.	Partly addressed	Absent or unclear
Q7	Latency measurement	Claimed latency specifies interval, load, statistic and method; claimed tail/SLO results state a quantile.	Partly addressed	Absent or unclear
Q8	Multi-tenant interference	Concurrent tenants/co-tenants are tested and evidence supports interference conclusions.	Partly addressed	Absent or unclear
Q9	Isolation evaluation	Claimed resource, security or fault isolation has a defined boundary and direct test or delimited evidence.	Partly addressed	Absent or unclear
Q10	Replication/limits	Details/artifacts support informed replication; threats, limits or configuration dependence are discussed.	Partly addressed	Absent or unclear

report id	criterion	score	maximum	rationale
GB-P004	Q4	1	2	Hardware/software specified;OS/kernel/driver not extracted
GB-P004	Q5	2	2	Same modified PyTorch;ready-model and swapping conditions explicit
GB-P004	Q6	2	2	Inference throughput and utilization denominator defined
GB-P004	Q7	2	2	End-to-end overhead defined;mean and extrema identified
GB-P004	Q8	2	2	Training/inference co-location;inference metric separated
GB-P004	Q9	1	2	Process/memory control described;security/fault testing not extracted
GB-P004	Q10	1	2	Versioned stack described;limitations documented;replication not attempted
GB-P005	Q1	2	2	Concurrent real-time/best-effort inference objective explicit
GB-P005	Q2	2	2	Reset preemption,queues and padding implementation described
GB-P005	Q3	1	2	Benchmark arrivals and baseline methods detailed;repeat/variance protocol not extracted
GB-P005	Q4	2	2	CPU,GPU,host RAM,OS,runtime,models andclients specified
GB-P005	Q5	2	2	RT-only and GPUStreams/SEQ conditions;extensions disclosed
GB-P005	Q6	2	2	Total RT+BE throughput and denominator explicit
GB-P005	Q7	1	2	End-to-end latency and load specified;request percentile not extracted
GB-P005	Q8	2	2	MultipleRT/BE clients and multiple mixes directly tested
GB-P005	Q9	1	2	Performance isolation tested;no extracted memory/security/fault boundary test
GB-P005	Q10	2	2	Artifact and idempotence/platform limitations explicit
GB-P006	Q1	2	2	Explicit goal
GB-P006	Q2	2	2	Mechanism classifiable
GB-P006	Q3	1	2	Repetition count unclear
GB-P006	Q4	2	2	Versioned setup
GB-P006	Q5	1	2	Wrapper caveat
GB-P006	Q6	2	2	Defined throughput
GB-P006	Q7	2	2	p99 specified
GB-P006	Q8	2	2	Mixed jobs tested
GB-P006	Q9	NA	0	No security/fault or resource-isolation guarantee appraised; fairness is assessed under Q8; N/A provis ional
GB-P006	Q10	2	2	Artifact and limits
GB-P007	Q1	2	2	Explicit goal
GB-P007	Q2	2	2	Interception specified
GB-P007	Q3	2	2	Three repetitions
GB-P007	Q4	2	2	Versioned setup
GB-P007	Q5	1	2	Reimplemented comparator
GB-P007	Q6	2	2	Defined aggregate metric
GB-P007	Q7	2	2	p99 and arrivals
GB-P007	Q8	2	2	Collocations tested
GB-P007	Q9	2	2	Trust boundary explicit
GB-P007	Q10	2	2	Artifact and limitations
GB-P008	Q1	2	2	Explicit goal

report id	criterion	score	maximum	rationale
GB-P008	Q2	2	2	Sharing described
GB-P008	Q3	1	2	Confidence intervals; counts unclear
GB-P008	Q4	2	2	Hardware and OS
GB-P008	Q5	2	2	Comparator scope stated
GB-P008	Q6	2	2	GUE defined
GB-P008	Q7	1	2	Tail statistic unclear
GB-P008	Q8	2	2	Concurrent functions
GB-P008	Q9	2	2	Fixed quotas and performance-isolation tests; no stronger security claim inferred
GB-P008	Q10	1	2	Reproduction incomplete
GB-P009	Q1	2	2	Explicit goal
GB-P009	Q2	2	2	Scheduling described
GB-P009	Q3	1	2	Repetition count unclear
GB-P009	Q4	1	2	Versions not extracted
GB-P009	Q5	1	2	Hardware mismatch disclosed
GB-P009	Q6	2	2	Goodput defined
GB-P009	Q7	2	2	SLO and CDF
GB-P009	Q8	2	2	Contending models
GB-P009	Q9	1	2	No fault guarantee
GB-P009	Q10	2	2	Artifact and limits
GB-P010	Q1	2	2	Inference/training colocation objective and scope explicit.
GB-P010	Q2	2	2	VMM pool, memory handover and SM-mask control described.
GB-P010	Q3	1	2	Trace distributions and300s windows described; repeated-run uncertainty not established in checked evaluation.
GB-P010	Q4	2	2	GPU, CPU/RAM, software and model sizes specified.
GB-P010	Q5	1	2	TaskSwitch is an adapted implementation; baseline choices explicit but implementation equivalence remains limited.
GB-P010	Q6	2	2	Training samples/s is defined; inference latency/SLO are kept distinct.
GB-P010	Q7	2	2	P99, request arrivals, window and SLO definition supplied.
GB-P010	Q8	2	2	Co-located inference/training traces tested on one GPU.
GB-P010	Q9	1	2	Memory-reclamation boundary described; stronger fault/security validation not established.
GB-P010	Q10	2	2	Detailed implementation and evaluated artifact supplied; scope limitations discussed.
GB-P011	Q1	2	2	Clear inference resource-sharing objective.
GB-P011	Q2	2	2	MIG/MPS segments and algorithms explained.
GB-P011	Q3	1	2	Profiling procedure and fleet scenarios described; repetition/uncertainty reporting unclear.
GB-P011	Q4	1	2	Hardware/workload described; runtime version1.14.0 is printed but needs verification.
GB-P011	Q5	1	2	Local process comparison interpretable; fleet baselines adapted and no final-version equivalence establ ished.
GB-P011	Q6	2	2	Throughput axes specify requests/s and exact local values are given.
GB-P011	Q7	1	2	Latency milliseconds and settings stated; profiler quantile unclear.

Continued on next page

report id	criterion	score	maximum	rationale
GB-P011	Q8	2	2	Concurrent MPS process counts evaluated inside one MIG segment.
GB-P011	Q9	1	2	MIG boundary described; no direct security/fault validation established.
GB-P011	Q10	1	2	Algorithms/settings detailed; accessed version remains preprint and replication verification incomplete.
GB-P012	Q1	2	2	Inference memory/density objective explicit.
GB-P012	Q2	2	2	API redirection, pooling and scheduling described.
GB-P012	Q3	1	2	Production trace and request rates given; repeated-run uncertainty not established.
GB-P012	Q4	1	2	GPU/CPU/RAM supplied; exact software version matrix missing in checked setup.
GB-P012	Q5	1	2	Native and adapted INFless-KA comparison described; resource/CPU paths differ.
GB-P012	Q6	2	2	Throughput/load definitions and local normalization supplied.
GB-P012	Q7	2	2	P98 and per-function load/SLO explicit.
GB-P012	Q8	2	2	Multiple functions share a single GPU in Figure8.
GB-P012	Q9	1	2	Sharing/isolation modes separated; strong security/fault tests not established for evaluated mode.
GB-P012	Q10	1	2	Implementation detail and limitations supplied; independent artifact reproduction unperformed.
GB-P013	Q1	2	2	Workflow-local runtime sharing objective explicit.
GB-P013	Q2	2	2	Streams,PTB compiler and memory management explained.
GB-P013	Q3	1	2	Production-style traces and ablations provided; repeated-run uncertainty unclear.
GB-P013	Q4	1	2	Hardware/frameworks named; OS/driver and version compatibility need checking.
GB-P013	Q5	1	2	Common optimizations enabled, but baselines adapted and batch choices affect ratios.
GB-P013	Q6	2	2	Memory and throughput units/ratios defined.
GB-P013	Q7	1	2	CDF/SLO reported; no precise tail scalar extracted.
GB-P013	Q8	2	2	Explicit3/6-user single-GPU test.
GB-P013	Q9	1	2	Same-runtime sharing weakens function isolation; security boundary is deliberately scoped.
GB-P013	Q10	2	2	Detailed implementation, preparation overhead and multi-user limits supplied.
GB-P014	Q1	2	2	Sharing/isolation/compatibility objectives explicit.
GB-P014	Q2	2	2	Kernel interception,token control and MIG orchestration described.
GB-P014	Q3	1	2	Setup and workload matrix supplied; repeated-run uncertainty unclear.
GB-P014	Q4	2	2	Hardware,OS,kernel,driver and frameworks specified.
GB-P014	Q5	1	2	Isolation-capable baselines and adapters disclosed; equivalence limited.
GB-P014	Q6	2	2	Quota/throughput metrics explicitly normalized.
GB-P014	Q7	2	2	QoS uses originalP99 and defined Poisson load/token lengths.
GB-P014	Q8	2	2	Local co-running inference error measured.
GB-P014	Q9	1	2	Boundary/security rationale described; direct fault/security validation not established in checked evaluation.
GB-P014	Q10	1	2	Implementation andMIGlimitations supplied; independent artifact reproduction unperformed.
GB-P015	Q1	2	2	Portable scheduling objective andGPUcase clear.
GB-P015	Q2	2	2	XQueue abstraction andmulti-level preemption described.
GB-P015	Q3	1	2	Workload rates and policies explicit; repeat uncertainty not established.
GB-P015	Q4	1	2	GPU/model/rates explicit;host/software versions incomplete in extracted case.
GB-P015	Q5	2	2	Same-GPU standalone/native priority comparisons supplied.

report id	short name	doi	source	anchor
GB-P017	HiveD: Sharing a GPU Cluster for Deep Learning with Guarantees		https://www.usenix.org/system/files/osdi20-zhao_hanyu.pdf	printed p515 abstract; section6 evaluation pp521-525; PDF pp2,8-12

Table 112: Fulltext checks: panel 2/3

report id	first reviewer recommendation	criterion rationale	remaining checks	reviewer
GB-P001	provisionally_eligible	Local A100 inference model pairs use tuned/default/no MPS; local GPU outcomes are separable from NPU cluster results.	Original chart check, second reviewer, exact quotas/batches, all source sections	Codex-GroupB
GB-P002	provisionally_eligible	Four inference models co-located on one V100, MPS quotas and local latency prediction are explicit; fleet costs kept distinct.	Second reviewer; OS/driver extraction; full-source verification of remaining fields	Codex-GroupB
GB-P003	provisionally_eligible	One-device paired inference interference and MPS partitioning are separable from multi-GPU scheduler results.	Second reviewer, complete outcome extraction and QA	Codex-GroupB
GB-P004	provisionally_eligible	Separable inference latency under local training/inference co-location; temporal switching and MPS comparator.	Second reviewer; mixed training/inference scope sensitivity; complete QA	Codex-GroupB
GB-P005	eligible_companion_candidate	Concurrent RT/BE inference tenants on MI50; later journal report must be linked as the same study.	Verify journal equivalence before preferred-report choice; second reviewer; no double counting	Codex-GroupB
GB-P006	provisionally_eligible	IC1-IC6 supported in checked source sections; eligible recommendation only.	Independent eligibility, numeric and QA verification; complete remaining fields.	Codex-GroupB
GB-P007	provisionally_eligible	IC1-IC6 supported in checked source sections; eligible recommendation only.	Independent eligibility, numeric and QA verification; complete remaining fields.	Codex-GroupB
GB-P008	provisionally_eligible	IC1-IC6 supported in checked source sections; eligible recommendation only.	Independent eligibility, numeric and QA verification; complete remaining fields.	Codex-GroupB
GB-P009	provisionally_eligible	IC1-IC6 supported in checked source sections; eligible recommendation only.	Independent eligibility, numeric and QA verification; complete remaining fields.	Codex-GroupB
GB-P010	provisionally_eligible_AI_source_assessment	Official USENIX ATC2025 proceedings PDF is an English primary conference report.; Section6.1 explicitly evaluates concurrent inference/training on one physical GPU.; Inference P99 and SLO outcomes are separated from training samples/s.; Figure10 and section6.1 identify baseline, metric and configuration.; Single-GPU section6.1 is separable from section6.2 multi-GPU results.; 2025 publication is within the main window.	Independent check unperformed; retain mixed-training scope restriction; extract only separable inference evidence, not training gains as inference gains.	Codex-GroupB source assessment

Continued on next page

report id	first reviewer recommendation	criterion rationale	remaining checks	reviewer
GB-P011	uncertain_publication_version;technical_scope_supported	SC24 publication identity has DOI, but accessed PDF is arXivv1; final-version equivalence unresolved.; MIG partition plus same-workload MPS processes runs within one physical GPU.; DNN inference explicit.; Local InceptionV3 profiler throughput/latency values and settings reported.; Local characterization in Figures3-4 separated from multi-GPU fleet results.; 2024 source and conference year within window.	Accessible source is arXivv1, not established as final conference text. Verify SC24 version before treating as included primary report; preserve source-version distinction.	Codex-GroupB source assessment
GB-P012	provisionally_eligible_AI_source_assessment	English primary report in official peer-reviewed USENIX proceedings.; Local GPU sharing/concurrent clients explicitly evaluated in the cited case.; Inference outcome is identifiable separately from training/rendering/NPU results.; Defined metric, comparator and configuration recorded in outcome rows.; A separable single-GPU experiment is identified; fleet-only gains not substituted.; 2025 publication within main review window.	AI source assessment only; independent check unperformed; preserve local GPU scope and exact metric caveats.	Codex-GroupB source assessment
GB-P013	provisionally_eligible_AI_source_assessment	English primary report in official peer-reviewed USENIX proceedings.; Local GPU sharing/concurrent clients explicitly evaluated in the cited case.; Inference outcome is identifiable separately from training/rendering/NPU results.; Defined metric, comparator and configuration recorded in outcome rows.; A separable single-GPU experiment is identified; fleet-only gains not substituted.; 2024 publication within main review window.	AI source assessment only; independent check unperformed; preserve local GPU scope and exact metric caveats.	Codex-GroupB source assessment
GB-P014	provisionally_eligible_AI_source_assessment	English primary report in official peer-reviewed USENIX proceedings.; Local GPU sharing/concurrent clients explicitly evaluated in the cited case.; Inference outcome is identifiable separately from training/rendering/NPU results.; Defined metric, comparator and configuration recorded in outcome rows.; A separable single-GPU experiment is identified; fleet-only gains not substituted.; 2025 publication within main review window.	AI source assessment only; independent check unperformed; preserve local GPU scope and exact metric caveats.	Codex-GroupB source assessment

Continued on next page

report id	first reviewer recommendation	criterion rationale	remaining checks	reviewer
GB-P015	provisionally_eligible_AI_source_assessment	English primary report in official peer-reviewed USENIX proceedings.; Local GPU sharing/concurrent clients explicitly evaluated in the cited case.; Inference outcome is identifiable separately from training/rendering/NPU results.; Defined metric, comparator and configuration recorded in outcome rows.; A separable single-GPU experiment is identified; fleet-only gains not substituted.; 2025 publication within main review window.	AI source assessment only; independent check unperformed; preserve local GPU scope and exact metric caveats.	Codex-GroupB source assessment
GB-P016	exclude_recommendation	EC2: Training-focused GPU container sharing; evaluation concerns production/opportunistic training jobs. Discussion explicitly places inference optimization outside this paper; no separable inference-sharing result identified.	AI-only assessment; no independent human review claimed	Codex-GroupB source assessment
GB-P017	exclude_recommendation	EC2: GPU-cluster resource reservation and affinity for deep-learning training; evaluated queueing/completion-time behavior is not concurrent local inference serving. EC2 decisive; aggregate cluster scope is a secondary limitation.	AI-only assessment; no independent human review claimed	Codex-GroupB source assessment

B.27 Fulltext decision history

Source table: 2 rows; 11 fields. Stable first-column keys are repeated across horizontal panels.

Table 115: Fulltext decision history: panel 1/3

record id	report id	old fulltext status	new fulltext status	old final decision
GB-R02285	GB-P016	not checked this cycle; existing full-text register takes precedence	AI_assessed_exclusion_EC2	pending
GB-R02286	GB-P017	not checked this cycle; existing full-text register takes precedence	AI_assessed_exclusion_EC2	pending

Table 116: Fulltext decision history: panel 2/3

record id	new final decision	criterion	reason	source anchor
GB-R02285	AI_exclude_fulltext	EC2	Training-focused GPU container sharing; evaluation concerns production/opportunistic training jobs. Discussion explicitly places inference optimization outside this paper; no separable inference-sharing result identified.	printed p69 abstract; evaluation pp75-80; p81 discussion; PDF pp2,8-14
GB-R02286	AI_exclude_fulltext	EC2	GPU-cluster resource reservation and affinity for deep-learning training; evaluated queueing/completion-time behavior is not concurrent local inference serving. EC2 decisive; aggregate cluster scope is a secondary limitation.	printed p515 abstract; section6 evaluation pp521-525; PDF pp2,8-12

B.30 Protocol requirements audit

Source table: 14 rows; 9 fields. Stable first-column keys are repeated across horizontal panels.

Table 122: Protocol requirements audit: panel 1/2

guideline heading	requirement	state	evidence	remaining
1	Background	Prepared	task2/report/main.tex; task1/submitted_protocol.pdf; final things/06_Task2_Submission/main.tex	Final evidence-based discussion belongs to final CEP
2	Engineering problem	Prepared	docs/topics.md; task2/report/main.tex; final things/06_Task2_Submission/main.tex	Bound at within-device inference sharing
3	Objective	Prepared	task1/submitted_protocol.pdf; task2/report/main.tex; final things/06_Task2_Submission/main.tex	Preserve utilization/latency/isolation focus
4	SLR methodology	Partial execution	evidence/protocol_amendments.md; task2/report/main.tex; final things/06_Task2_Submission/main.tex	Executed deviations must remain explicit
5	Required activities / RQs	Prepared	evidence/shared_leads.csv; task1/submitted_protocol.pdf; final things/06_Task2_Submission/main.tex	RQ1-RQ5 interim answers drafted in section19; final validation and synthesis pending; verify preliminary literature/novelty comparison against existing reviews
6	SLR protocol	Prepared	task1/submitted_protocol.pdf; evidence/protocol_amendments.md; final things/06_Task2_Submission/main.tex	Original preserved; amendments separate
7	Database selection	Partial	evidence/import_manifest.csv; evidence/IMPORT_PROVENANCE.md; final things/06_Task2_Submission/main.tex	Four platforms represented; search completeness unverified; attributed shared searches retained
8	Search strategy	Partial	evidence/planned_queries.csv; evidence/search_runs.csv; evidence/imports/group-a/search_runs.csv; evidence/incoming_shared/search_log_2026-10-16.txt; final things/06_Task2_Submission/main.tex	Query/export audit added; ACM 79-file mapping and MPS 517 displayed versus 563 parsed unresolved; planned serving synonyms and older MPS lanes require verification
9	Literature period	Partial	task1/submitted_protocol.pdf; evidence/protocol_amendments.md; final things/06_Task2_Submission/main.tex	Per-run historical dates separated; publication_date_audit.csv flags missing/older/2026 dates for checks
10	Inclusion/exclusion	Partial	evidence/screening.csv; evidence/fulltext_criteria.csv; evidence/fulltext_checks.csv; evidence/fulltext_exclusions.csv; final things/06_Task2_Submission/main.tex	4075 initial triage recommendations;1441 exclude proposals;2634 retain/uncertain;17 source assessments and102 IC rows;complete abstract/source selection pending
11	PRISMA 2020	Partial	evidence/prisma_counts.json; task2/submission/GroupB_Review_Report.pdf; evidence/duplicates.csv; final things/06_Task2_Submission/main.tex	4189 occurrences minus114 links equals4075 canonical;2 assessed EC2 exclusions;final selection/PRISMA pending; current interim diagram embedded in current report
12	Search/screening log	Partial	evidence/cycle3_screening_log.csv; evidence/cycle3_duplicate_ledger.csv; task2/submission/screening_log.csv; final things/06_Task2_Submission/main.tex	4075 record-keyed screening rows and4189 occurrence-ledger rows; source decisions/IDs preserved; no human consensus or final included-study count claimed
13	Quality assessment	Partial	task2/qa/qa_score_matrix.csv; evidence/quality.csv; final things/06_Task2_Submission/main.tex	15 assessed forms/150 first QA items; source/calibration/selection gaps retained

Continued on next page

guideline heading	requirement	state	evidence	remaining
14	Data extraction	Partial	15studyforms;45outcomes;2calculations; task2/submission/GroupB_Data_Extraction.pdf; final things/06_Task2_Submission/main.tex	Expand beyond current assessed set; resolve source versions and unchecked fields

Table 123: Protocol requirements audit: panel 2/2

guideline heading	required section	table or diagram	evidence files	missing work
1	Context and utilization/latency/isolation problem discussion	No separate table/diagram mandated	task2/report/main.tex; task1/submitted_protocol.pdf; final things/06_Task2_Submission/main.tex	Final evidence-based discussion belongs to final CEP
2	Within-device engineering scope, tenants, alternatives and constraints	Mechanism/scope table in protocol; no mandatory separate figure	docs/topics.md; task2/report/main.tex; final things/06_Task2_Submission/main.tex	Bound at within-device inference sharing
3	Conditional engineering objective	Five-RQ table in report Section 3	task1/submitted_protocol.pdf; task2/report/main.tex; final things/06_Task2_Submission/main.tex	Preserve utilization/latency/isolation focus
4	Protocol-based SLR and PRISMA methodology	Method description and actual-action limitations	evidence/protocol_amendments.md; task2/report/main.tex; final things/06_Task2_Submission/main.tex	Executed deviations must remain explicit
5	Problem definition, preliminary investigation, terminology and RQs	RQ table; novelty/related-review comparison needs verification	evidence/shared_leads.csv; task1/submitted_protocol.pdf; final things/06_Task2_Submission/main.tex	RQ1-RQ5 interim answers drafted in section19; final validation and synthesis pending; verify preliminary literature/novelty comparison against existing reviews
6	All 12 protocol elements and documented deviations	Separate protocol amendment table/log	task1/submitted_protocol.pdf; evidence/protocol_amendments.md; final things/06_Task2_Submission/main.tex	Original preserved; amendments separate
7	Database selection and justification against NED resources	Database coverage/provenance table; preferably four sources	evidence/import_manifest.csv; evidence/IMPORT_PROVENANCE.md; final things/06_Task2_Submission/main.tex	Four platforms represented; search completeness unverified; attributed shared searches retained
8	Keywords and exact database-specific executed strategy	Planned/executed query tables including fields/filters/date/hits/exports	evidence/planned_queries.csv; evidence/search_runs.csv; evidence/imports/group-a/search_runs.csv; evidence/incoming_shared/search_log_2026-10-16.txt; final things/06_Task2_Submission/main.tex	Query/export audit added; ACM 79-file mapping and MPS 517 displayed versus 563 parsed unresolved; planned serving synonyms and older MPS lanes require verification
9	Main window and justified older-study exceptions	Cutoff and exception entries; no mandatory standalone diagram	task1/submitted_protocol.pdf; evidence/protocol_amendments.md; final things/06_Task2_Submission/main.tex	Per-run historical dates separated; publication_date_audit.csv flags missing/older/2026 dates for checks

Continued on next page

guideline heading	required section	table or diagram	evidence files	missing work
10	Explicit topic-specific IC1-IC6 and EC1-EC7	Eligibility/reason tables and distinct preliminary/final decisions	evidence/screening.csv; evidence/fulltext_criteria.csv; evidence/fulltext_checks.csv; evidence/fulltext_exclusions.csv; final things/06_Task2_Submission/main.tex	4075 initial triage recommendations;1441 exclude proposals;2634 retain/uncertain;17 source assessments and102 IC rows;complete abstract/source selection pending
11	Traceable identification, deduplication, screening, retrieval, assessment and inclusion	PRISMA 2020 flow diagram plus count table; final stages pending	evidence/prisma_counts.json; task2/submission/GroupB_Review_Report.pdf; evidence/duplicates.csv; final things/06_Task2_Submission/main.tex	4189 occurrences minus114 links equals 4075 canonical;2 assessed EC2 exclusions;final selection/PRISMA pending; current interim diagram embedded in current report
12	Submitted search and screening log with immutable IDs	Study ID/database/title/year/duplicate/TA/FT/reason/final status table	evidence/cycle3_screening_log.csv; evidence/cycle3_duplicate_ledger.csv; task2/submission/screening_log.csv; final things/06_Task2_Submission/main.tex	4075 record-keyed screening rows and4189 occurrence-ledger rows; source decisions/IDs preserved; no human consensus or final included-study count claimed
13	Justified Q1-Q10 appraisal at 0-2 with rationales and source anchors	Rubric and per-report score/applicable-maximum tables; preserve independent scores	task2/qa/qa_score_matrix.csv; evidence/quality.csv; final things/06_Task2_Submission/main.tex	15 assessed forms/150 first QA items; source/calibration/selection gaps retained
14	Structured study-level environment, hardware, workload, baseline and outcomes	Study extraction form and anchored outcome table including limitations/trade-offs	15studyforms;45outcomes;2calculations; task2/submission/GroupB_Data_Extraction.pdf; final things/06_Task2_Submission/main.tex	Expand beyond current assessed set; resolve source versions and unchecked fields

B.31 Cycle status

Source table: 7 rows; 4 fields. Stable first-column keys are repeated across horizontal panels.

Table 124: Cycle status: panel 1/1

cycle	name	status	remaining
1	Recovery and requirements audit	Closed audit scope	Research gaps tracked separately
2	Queries/imports/four-database audit	Closed audit scope with documented gaps	ACM run mapping; historical hit/export discrepancies; search completeness
3	Screening/full-text selection	Partial	2617 canonical candidates lack source assessment; final selection pending
4	Quality assessment	Partial overall; current15forms covered	23section/figure anchors;3provisional N/A calibrations; future eligible candidates
5	Data extraction	Partial overall; current15forms covered	Unchecked fields and new eligible candidates; version reconciliation
6	PRISMA and references	Interim outputs	Final selection and report/study linkage needed for final flow
7	Task 2 through Heading 14	Consolidated interim preparation	Final research selection incomplete; technical build and verification receipt in 06_Task2_Submission/VALIDATION.json

C Complete source-value glossary

V-codes used in the large log tables expand to the complete source values below, with whitespace and typographic punctuation normalized for print. Codes are value identifiers, not records, reports or studies. All source rows remain in their tables.

V00153	A 3D single-volume-based denoising diffusion probabilistic model for microstructure recons truction of porous materials
V00154	A Bayesian clustering ensemble Gaussian process model for network-wide traffic flow cluste ring and prediction
V00155	A Comprehensive Survey of Small Language Models in the Era of Large Language Models: Techniques, Enhancements, Applications, Collaboration with LLMs, and Trustworthiness
V00156	A Controlled Digital Rock Reconstruction Method for Coral Reef Limestone based on Generative Adversarial Networks
V00157	A Feature-Enhanced Physics Informed Neural Network for trajectory simulation of charged particles
V00158	A Framework for Generating a 3D Synthetic Dataset for Automatic Crack Detection in Masonry Surfaces
V00159	A Framework for Tracking the Theme of Chinese Language and Literature in the Past 100 Years Based on High-Performance Theme Model
V00160	A GPU-accelerated stiff ODE solver for combustion CFD with fully analytical chemical kinetics and heterogeneous CPU/GPU integration
V00161	A Generative AI Framework for Enhancing Human-AI Collaborative Creation in Artistic Design Services
V00162	A Genetic Algorithm-based approach for placement in the fog of latency-sensitive multip layer game servers

Code	Original source value
V00163	A Holistic View on Resource Management in Serverless Computing Environments: Taxonomy and Future Directions
V00164	A Hybrid Forecasting and Reinforcement Learning Approach for Latency-Constrained Scaling of Generative AI Systems
V00165	A Kriging-Markov hybrid method for real-time spatiotemporal indoor daylight prediction under data-sparse and sensor-limited conditions toward adaptive daylight control applications
V00166	A Linux-based support for developing real-time applications on heterogeneous platforms with dynamic FPGA reconfiguration
V00167	A Mobile&PIXOR architecture enhanced with dual attention mechanisms for LiDAR-based pedestrian detection in complex urban environments
V00168	A Multi-illumination Dataset and an Illumination Domain Adaptation Network for Finger Vein Identification
V00169	A Multimodal Behavior Modeling and Graph Attention Network Based Method for Detecting Digital Dependency and Value Hollowing and Optimizing Interventions
V00170	A Privacy-Preserving Aggregation Mechanism with Multi-Key Support and Short Ciphertexts for Federated Learning
V00171	A Proposal for FPGA-Accelerated Deep Learning Ensembles in MPSoC Platforms Applied to Malware Detection
V00172	A Provenance-based Execution Strategy for Variant GPU-accelerated Scientific Workflows in Clouds
V00173	A Quantitative Analysis and Guidelines of Data Streaming Accelerator in Modern Intel Xeon Scalable Processors
V00174	A Re-parameterized Network-Based Lightweight Multimodal Fusion Network for Early Lung Cancer Risk Prediction
V00175	A Review of 3D Reconstruction Methods for Complex Microstructures of Porous Media: Imaging Devices, Techniques and Applications
V00176	A Review of AI-Driven Automation Technologies: Latest Taxonomies, Existing Challenges, and Future Prospects
V00177	A Robust Deep Learning-Assisted Digital Image Correlation for Deformation Measurement at 1600 °C in Air
V00178	A Security-Based Trust-Aware Heterogeneous Scheduling Framework for Internet of Vehicles Workflows
V00179	A Space-Air-Ground Integrated Network Traffic Estimation Algorithm Based on Time-Varying Higher-Order Moments
V00180	A Spatio-Temporal Attention Convolutional Network with Topology-Preserving Channel Embedding and Transformer for EEG Decoding
V00181	A Survey on Chinese Sign Language Recognition: From Traditional Methods to Artificial Intelligence
V00182	A Systematic Literature Review of Deep Learning Algorithms for Segmentation of the COVID-19 Infection
V00183	A Weakly Supervised Deep Learning Approach for Detecting Malaria and Sickle Cells in Blood Films
V00184	A bidirectional cross global attention based network for aeroengine remaining useful life prediction
V00185	A bimodal framework for nonstationary process monitoring via collaborative contrastive and adversarial unsupervised learning
V00186	A bus origin-destination prediction model based on deep spatio-temporal residual networks: Incorporating built environment features
V00187	A certain examination on heterogeneous systolic array (HSA) design for deep learning accelerations with low power computations
V00188	A characteristic oriented probabilistic stability assessment method based on physics-informed neural network for stochastic power system
V00189	A collaborative evolutionary reinforcement learning approach to dynamic pickup and delivery challenges
V00190	A collaborative network via multi-head sparse and high-low frequency interaction for hyperspectral image classification
V00191	A comparative analysis of proactive and reactive methods for privacy-aware interleaved DNN offloading
V00192	A comparative assessment of machine learning models and algorithms for osteosarcoma cancer detection and classification
V00193	A comparative study of deep learning models for welding process analysis using sequential models

Code	Original source value
V00194	A comprehensive survey for Hyperspectral Image Classification: The evolution from conven tional to transformers and Mamba models
V00195	A comprehensive survey of Network Digital Twin architecture, capabilities, challenges, and requirements for Edge-Cloud Continuum
V00196	A comprehensive survey on crack detection and classification: Methods, challenges, and future directions
V00197	A comprehensive systematic review of numerical studies on flow and heat transfer of shear-rate-dependent non-Newtonian fluids
V00198	A conditional denoising diffusion probabilistic model with soft and hard data for micros tructure reconstruction of porous materials
V00199	A conditional masked autoencoder network based on efficient multiple-head self-attention for characterizing heterogeneous reservoirs
V00200	A content-aware dual attention mechanism for improving bias and accuracy in kinship identi fication across diverse ethnicities using family images
V00201	A convolution and attention-based conditional adversarial domain adaptation neural networ k for emotion recognition using electroencephalography
V00202	A convolutional neural network approach to extract the beat frequency of reflectometry for real-time profile inversion on EAST
V00203	A critical review on pavement distress detection using images and point clouds from visual features to geometric modeling
V00204	A critical review on the state-of-the-art and future prospects of machine learning for Earth observation operations
V00205	A data-adaptive strategy for hyperparameter selection in physics-informed neural networks for healthcare epidemic analytics
V00206	A decomposable multi-fusion spatio-temporal marine traffic flow forecasting algorithm: Taking the North Sea and Baltic Sea region as an example
V00207	A deep learning WKB-PINNs framework for forward and inverse problems of semiclassical nonlinear Schrödinger equations
V00208	A deep learning and finite element approach for exploration of inverse structure-property designs of lightweight hybrid composites
V00209	A deep learning approach to cardiovascular disease classification using empirical mode decomposition for ECG feature extraction
V00210	A deep learning based dynamic bandwidth allocation method for XG-PON based mobile fronthaul for CRAN
V00211	A deep learning framework combining windowed CNN and BiLSTM for accurate multi-class pathogenic variant classification in monogenic diseases
V00212	A deep learning interatomic potential suitable for simulating radiation damage in bulk tungsten
V00213	A deep learning model for enhancing prediction accuracy of real-time fire temperature fields inside railway vehicles under complicated scenarios
V00214	A deep-learning approach for turbulence correction in free space optical communication with Laguerre-Gaussian modes
V00215	A diffusion-based feature enhancement approach for driving behavior classification with EEG data
V00216	A digital twin framework for predictive modeling of liver-on-a-chip system dynamics using limited experimental data
V00217	A digital twin-enabled system for real-time interactive monitoring and evaluation of aircraft tooling in the assembly process
V00218	A dual branch graph neural network based spatial interpolation method for traffic data inference in unobserved locations
V00219	A dual-modality deep learning approach for fine-grained sentiment analysis using speech and text
V00220	A dual-prototype network combining query-specific and class-specific attentive learning for few-shot action recognition
V00221	A dynamic graph attention network for traffic flow prediction based on multi-domain featur es fusion
V00222	A dynamic-static spatial information fusion spatiotemporal network for traffic crash predic tion considering high-order and dynamic spatial correlations
V00223	A fast deep spatial-temporal perception model based on tucker decomposition and multi-source factors for efficient nonlinear traffic flow forecasting
V00224	A fast matrix autoregression algorithm based on Tucker decomposition for online prediction of nonlinear real-time taxi-hailing demand without pre-training

Code	Original source value
V00225	A feasibility study of multi-mode intelligent fusion medical data transmission technology of industrial Internet of Things combined with medical Internet of Things
V00226	A feature extraction and deep learning approach for network traffic volume prediction consid ering detector reliability
V00227	A filtering-based reinforcement learning strategy for adaptive task routing in multi-actuator robotic weeding
V00228	A gait detection and recognition method based on double-joint coupled displacement and derived kinematic features
V00229	A game-based deep reinforcement learning approach for energy-efficient computation in MEC systems
V00230	A generalist deep-learning volume segmentation tool for volume electron microscopy of biological samples
V00231	A generative machine learning model for the 3D reconstruction of material microstructure and performance evaluation
V00232	A geology-informed graph neural network solution for addressing the data sparsity challe nge in 3D geological modeling
V00233	A heterogeneity-aware federated learning framework for multimodal nanotoxicological risk assessment
V00234	A hybrid CNN-transformer network with cross-level multi-scale fusion and hierarchical attention for brain tumour MRI segmentation
V00235	A hybrid of statistical and conditional generative adversarial neural network approaches for reconstruction of 3D porous media (ST-CGAN)
V00236	A hybrid prediction model of frequency-informed guidance and temporal attention-enhanc ed segment GRU for time holdover
V00237	A hybrid virtual element method and deep learning approach for solving one-dimensional Euler-Bernoulli beams
V00238	A hypergraph-enhanced hierarchical learning method to incorporate user's spatiotemporal routines into next POI recommendation system
V00239	A knowledge-data hybrid generative pretrained model for the interpretation of sedimentary microfacies
V00240	A learning-based automatic segmentation and quantification method on left ventricle in gated myocardial perfusion SPECT imaging: A feasibility study
V00241	A lightweight FPGA accelerator for onboard processing of hyperspectral anomaly detection based on optimized TinyYOLOv3 model
V00242	A lightweight and dynamic multi-teacher knowledge distillation framework for remaining useful life prediction of lithium-ion batteries
V00243	A lightweight digital twin of cold metal transfer welding based on twin data and improved C-DCGAN algorithm
V00244	A link prediction method for MANETs based on fast spatio-temporal feature extraction and LSGANs
V00245	A load forecasting method based on heterogeneous network for integrated electricity and heat systems
V00246	A low-altitude emergency event grade prediction model integrating attention mechanism and spatio-temporal graph neural network
V00247	A low-latency intelligent edge computing architecture for real-time decision-making in large-scale IoT networks
V00248	A mask protection-based and multi-probabilistic prior dictionary-guided unfolding model for pansharpening
V00249	A method for analyzing the impact of SEUs on satellite networks from the perspective of distributed routing
V00250	A model for early propagation of derivative adversarial topics based on emotional transfer and evolutionary game theory
V00251	A morphological information-guided detection network for various morphological objects in remote sensing imagery
V00252	A multi objective DB-RNN based core prediction and resource allocation scheme for multic ore processors
V00253	A multi-branch feature enhancement-based detection and hierarchical chaotic encryption fusion method for sensitive targets in remote sensing images
V00254	A multi-scale feature extraction and fusion framework based on wavelet Kolmogorov-Arnold networks and parallel Bi-directional gated recurrent units for electric load forecasting
V00255	A multi-sensor deep metric learning method for unknown anomaly detection in unmanned aerial vehicles

Code	Original source value
V00256	A multi-source feature-integrated spatiotemporal graph transformer network for short-term origin-destination passenger flow prediction in urban rail transit
V00257	A multi-stage fusion network for transportation mode identification with varied scale repres entation of GPS trajectories
V00258	A multidimensional Bayesian architecture for real-time anomaly detection and recovery in mobile robot sensory systems
V00259	A multiscale 3D convolution with context attention network for hyperspectral image classi fication
V00260	A new challenging image dataset with simple background for evaluating and developing co-segmentation algorithms
V00261	A new method incorporating deep learning with shape priors for left ventricular segmen tation in myocardial perfusion SPECT images
V00262	A non-linear granger causality-driven dynamic graph neural network for marine buoy data imputation
V00263	A novel Causality-Constrained Synchronous Spatio-Temporal Graph Convolutional Networ ks for fault diagnosis in large-scale industrial processes
V00264	A novel GPU cluster scheduling algorithm for cloud computing: a power-grid-inspired predic tive-optimization framework
V00265	A novel Transformer-Enhanced PINN approach to the Fokas-Lenells equation: Forward and inverse problems
V00266	A novel attention mechanism-based multi-branch long short-term memory network model for mental workload recognition of crew in tunnel navigation
V00267	A novel data-efficient double deep Q-network framework for intelligent financial portfolio management
V00268	A novel deep multi-source domain adaptation framework for bearing fault diagnosis based on feature-level and task-specific distribution alignment
V00269	A novel ensemble machine learning exposure model system for ground-level ozone at the national scale: A case of mainland China from 2013 to 2020
V00270	A novel high-resolution downscaling method for daily extreme precipitation using Sentin el-5P cloud parameters
V00271	A novel hybrid model for long-term wind power forecasting base on adaptive distribution shift and low-noise feature enhancement
V00272	A novel multi-dimensional features fusion algorithm for the EEG signal recognition of brain's sensorimotor region activated tasks
V00273	A novel multi-task semi-supervised medical image segmentation method based on multi-branch cross pseudo supervision
V00274	A novel obstructive sleep apnea detection model based on multi-scale convolutional neural networks
V00275	A novel offloading strategy for multi-user optimization in blockchain-enabled Mobile Edge Computing networks for improved Internet of Things performance
V00276	A novel photovoltaic cell defect detection method: A deep learning model based on multi-scale enhanced feature extraction
V00277	A novel sky image-based solar irradiance nowcasting model with convolutional block attent ion mechanism
V00278	A novel spatio-temporal adaptive network considering time-delay effect for traffic flow foreca sting
V00279	A novel time-discrete physics-informed neural network framework for forward and inverse problems of the 2D tempered fractional generalized Burgers equation
V00280	A novel tool wear and remaining useful life prediction network based on multi-scale time-frequency information of milling force
V00281	A novel transfer learning-based approach for accurate segmentation and morphometric quantification of microplastics in heterogeneous optical microscopy images
V00282	A novel video compression model based on GPU virtualization with CUDA platform using bi-directional RNN
V00283	A pore space reconstruction method of shale based on autoencoders and generative advers arial networks
V00284	A practical framework for rapid earthquake damage estimation through multi-vehicle coordi nation and inter-agency collaboration: Integration of genetic algorithms and RGB image analysis
V00285	A predictor circuit and a delay-aware algorithm for identifying data transfer pattern on NoC-based communication networks
V00286	A real-time GPU-accelerated deep learning inference integration pipeline and its electron density profile reconstructor pilot project for control at ASDEX upgrade

Code	Original source value
V00287	A real-time closed-loop control system for adaptive robotic welding: a step toward intell igent welding
V00288	A review of brain injury at multiple time scales and its clinicopathological correlation throug h in silico modeling
V00289	A review of machine learning techniques for urban resilience research: The application and progress of different machine learning techniques in assessing and enhancing urban resilience
V00290	A review of the application of machine learning in the field of fire public safety: From risk assessment to emergency decision-making
V00291	A review on explainable artificial intelligence in radiomics: State-of-the-art tools, prospe ctive use cases, challenges and future directions
V00292	A robust adversarial ensemble with causal (feature interaction) interpretations for image classification
V00293	A robust and versatile deep learning model for prediction of the arterial input function in dynamic small animal [18F] FDG PET imaging
V00294	A semi-supervised compound fault diagnosis method based on hierarchical attention and self-supervised graph learning for the rotary components of robots' joints
V00295	A shallow network for hyperspectral image classification using an autoencoder with convol utional neural network
V00296	A short-term traffic flow prediction model for road networks using inverse isochrones to determine dynamic spatiotemporal correlation ranges
V00297	A simulation framework for benchmarking reinforcement learning policies in adaptive mock-interview tutoring
V00298	A single shot multibox detector based on welding operation method for biometrics recogn ition in smart cities
V00299	A spatial-temporal trend-aware neural network model for accurate water quality prediction in river
V00300	A spatio-temporal synchronous graph machine learning for prediction and optimization of regional traffic flow
V00301	A spatiotemporal discrete graph operator network for learning transient dynamics on irregu lar meshes
V00302	A stable soft sensor based on causal inference and graph convolutional network for batch processes
V00303	A state-of-the-art review on the research and application of on-machine measurement with a touch-trigger probe
V00304	A study for application research of consumer behavior in the next generation digital networ k service platform
V00305	A survey of deep learning techniques based Parkinson's disease recognition methods employ ing clinical data
V00306	A survey of deep reinforcement learning application in 5G and beyond network slicing and virtualization
V00307	A survey of integrated multi-layer security for continuous-process industrial control systems: Insights from a steel manufacturing sector
V00308	A survey on advancements in image-text multimodal models: From general techniques to biomedical implementations
V00309	A survey on deep learning-based single image crowd counting: Network design, loss functi on and supervisory signal
V00310	A systematic literature review on energy efficiency in serverless environments: Taxonomy, techniques, and future directions
V00311	A systematic review of machine learning methods applied to fuel cells in performance evalua tion, durability prediction, and application monitoring
V00312	A temporal-spectral fusion transformer with subject-specific adapter for enhancing RSVP-BCI decoding
V00313	A text mining and ontology-based approach using phenotypes to obtain relevant literature for rare diseases
V00314	A traffic flow prediction framework based on integrated federated learning and Recurrent Long short-term networks
V00315	A two channel optimized SWH deep learning forecast model coupled with dimensionality reduction scheme and attention mechanism
V00316	A two-stage downscaling hydrological modeling approach via convolutional conditional neural process and geostatistical bias correction
V00317	A two-stage learning hyper-heuristic for integrated open-field layout and fuzzy flexible job shop scheduling

Code	Original source value
V00318	A unified multimodal GenAI platform integrating GraphRAG multi-agent systems and custom language models for intelligent document processing and knowledge synthesis

Code	Original source value
V01986	Time-series clustering of high-speed photography based on Multi-channel Variational Autoen coder in a scramjet combustor
V01987	Title and available metadata describe training/tuning; no separable concurrent inference outcome identified at this preliminary stage.
V01988	Title explicitly addresses training/post-training rather than separable concurrent inference evidence. Recheck abstract if mixed-workload evidence appears.
V01989	Title explicitly concerns Corrosion application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V01990	Title explicitly concerns Lithium-ion application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V01991	Title explicitly concerns Seismic application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V01992	Title explicitly concerns blood glucose application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V01993	Title explicitly concerns concrete application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V01994	Title explicitly concerns corrosion application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V01995	Title explicitly concerns crop application/domain; supplied title/abstract has no GPU-platfo rm evidence. Automated exclusion proposal, not final eligibility.
V01996	Title explicitly concerns drug delivery application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V01997	Title explicitly concerns electrochemical application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V01998	Title explicitly concerns lithium-ion application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V01999	Title explicitly concerns seismic application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V02000	Title explicitly concerns soil application/domain; supplied title/abstract has no GPU-platfo rm evidence. Automated exclusion proposal, not final eligibility.
V02001	Title explicitly concerns tumor segmentation application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V02002	Title explicitly concerns wastewater application/domain; supplied title/abstract has no GPU-platform evidence. Automated exclusion proposal, not final eligibility.
V02003	Title explicitly identifies a review/survey; context source rather than primary eligible report.
V02004	Title explicitly identifies a survey, poster or extended abstract; primary full report must be located separately.
V02005	Title explicitly identifies a survey/review, not an eligible primary report. Retain separately for context/citation leads; independent confirmation pending.
V02006	Title explicitly targets FPGA; exported abstract contains no GPU evidence. Automated exclusion proposal; source verification not final.
V02007	Title explicitly targets FPGAs; exported abstract contains no GPU evidence. Automated exclusion proposal; source verification not final.
V02008	Title explicitly targets neuromorphic; exported abstract contains no GPU evidence. Automa ted exclusion proposal; source verification not final.
V02009	Title explicitly targets quantum computing; exported abstract contains no GPU evidence. Automated exclusion proposal; source verification not final.
V02010	Title identifies hardware/kernel/communication optimization without an identifiable tenant-sharing mechanism; abstract verification needed.
V02011	Title plausibly concerns GPU inference/sharing or is ambiguous; retain for abstract/full-text checking. No eligibility inferred from title alone.
V02012	Title targets CPU, FPGA, NPU or non-GPU processor; verify abstract before final exclus ion.
V02013	Title/venue explicitly identifies a secondary, poster or abstract-only report; locate full primary version separately.

D Protocol amendments and completion boundaries

Group B protocol amendments

The submitted 27 September 2026 PDF is the baseline. The run date within 2026 is an open end specified by that document and does not itself change the method. Recorded implem entation decisions and authorizations are listed below; no unrecorded approval is implied.

| Date/time UTC | Previous wording | New wording | Reason | Who approved | Runs and records affected | Rerun or re-screen action | | — | — | — | — | — | — | — | | Pending | | | | | | |

If the browser rejects a planned query, log its exact error and the accepted equivalent in ‘search_runs.csv‘, then decide whether its meaning changed enough to need an amendment. Changing eligibility or the database set must be documented before applying it.

Recorded implementation decisions, 15 October 2026

- **B002, shared search reuse:** User authorizes importing Group A’s committed IEEE/ Springer search captures and assessments as attributed shared data. This is a documented departure from executing all Group B planned expressions. The exact imported queries/ fields and missing historical lanes are disclosed; no equivalence or rerun is claimed. All 689 shared database occurrences and 20 supplementary leads are affected. Group B criter ia and independent decision requirements are retained. - **B003, ScienceDirect deferral: ** User explicitly defers the fourth planned platform. Its 100 earlier incoming RIS occurr ences remain unchanged outside the active payload. The interim report must not claim a complete four-database review. A later addition requires new provenance, linkage and count reconciliation. - **B004, screening implementation:** First-review AI title checks and explic it BibTeX publication-type recommendations are saved separately. Two independent reviews and final reconciliation remain required by the submitted protocol. Automated prioritization never supplies a final exclusion. No scoring scale is converted from Group A. - **B005, citati on pilot:** Four selected references from gpulets were checked backward. This bounded pilot is not exhaustive snowballing. Forward chasing remains pending; unimported leads are not added to current record totals.

B006 ScienceDirect export integration 16 October 2026

The current user authorizes Cycle 2 integration of usable archived ScienceDirect records, superseding the earlier deferral for these supplied batches. Twenty one preserved RIS files contribute 1,898 occurrences across four reported fallback query families. This is reuse of supplied historical search exports, not a newly executed search. The broad search field and TEMPORAL open access URL facet differ from the submitted metadata focused plan and are disclosed. Exact pagination, operator identity, MPS 517 displayed versus 563 parsed, historical MPS lanes, and complete coverage remain unresolved. All existing IDs and review events are preserved; 1,831 new canonical records await first screening. No new eligibility decisions are made. The two overlapping ACM masters and 68 previously staged identifiers remain outside active counts because original run to batch mapping is unresolved.

16 October 2026: user-authorized AI-only continuation The user explicitly requests comple tion without waiting for manual reviewer returns. Automated first triage and source-based AI eligibility, QA and extraction can proceed. These are identified by actual AI assessor/

method; independent human fields remain blank. This is a deviation from the planned two-human-reviewer process, not evidence that it occurred. Preserve original first scores/ votes and unresolved cases. The submitted Task 1 PDF and IC/EC and Q1-Q10 meanings are unchanged. Final selection cannot be inferred from automated triage alone.

What must still be completed

Complete verified title/abstract and source eligibility for the remaining candidate queue; reconcile REEF and ParvaGPU report/study versions; resolve the documented search-provenance gaps; complete the quality-anchor and N/A calibration follow-ups; and derive final inclusion and PRISMA numbers from those actual decisions. Missing exact event times remain unrecorded. Independent reviewer fields do not represent completed human checks.

E Submitted Task1 protocol

The following protocol PDF is preserved byte for byte. Its original pagination and references remain part of that submitted document.

GPU Sharing Mechanisms for Multi-Tenant Inference Serving: Time-Slicing vs. MPS vs. MIG vs. API Remoting

A Study of Utilization, Latency, and Isolation in Operating Systems

Roll number	Name
SE-24008	ESHAAL FAISAL
SE-24009	RAAZIA

27 September 2026

1253

1 Background and Motivation

Modern machine-learning inference systems may serve multiple applications, models or customers on a shared GPU. In this protocol, a *tenant* is a separately managed inference workload or process whose performance may be affected by co-tenants. A single physical GPU may be shared to improve use of capacity and support more tenants; the magnitude of any benefit depends on workload and configuration and is an empirical question. GPU resource management involves driver/runtime and device-level behavior as well as operating-system scheduling. Hardware support for preemption and isolation varies by GPU and software stack; it must not be generalized from one product generation to all GPUs.

Table 1 distinguishes the four assigned comparison families from related implementation labels. NVIDIA's documentation defines MPS as a service allowing multiple CUDA processes to share GPU resources, MIG as partitioning supported GPUs into instances, and time-slicing as a form of shared access with weaker memory/fault isolation than MIG in its GPU Operator setting [1, 2, 3]. Vendor documentation establishes terminology and documented capabilities, not independent comparative inference results.

Table 1: Mechanism framework and scope

Mechanism	Basic approach	Review role
Time-slicing	Multiple tenants obtain GPU execution over different time intervals; configuration and actual preemption behavior are recorded.	Core temporal family
NVIDIA MPS	CUDA processes share GPU execution resources through the MPS service; exact limits/settings depend on version.	Core MPS family
NVIDIA MIG	A supported physical GPU is partitioned into hardware GPU instances with documented isolation properties and fixed profiles.	Core spatial family
GPU virtualization	Virtual GPU environments expose GPU resources to tenants; classify by underlying temporal, spatial or API mechanism.	Context or remoting subtype
API interception/remoting	GPU calls are intercepted or forwarded to a local/remote GPU service; record transport and whether the target is one node/device.	Core API family
Custom GPU schedulers	Policies choose allocation or execution order; record the underlying sharing primitive.	Context or hybrid
Hybrid approaches	Combine two or more primitives, such as partitions with time-slicing.	Cross-cutting category

The motivation is a possible trade-off between utilization/tenant density and predictable per-tenant performance/isolation. It is a review hypothesis, not a result: some workload mixes may benefit from partitioning or sharing without the expected penalty, while others may show

contention or stranded capacity. The relevant operating-systems concerns include time-sharing versus partitioning, throughput versus fairness, utilization versus isolation, and performance versus predictability. Contention can occur for compute, memory capacity, bandwidth, cache and scheduling opportunities; the causal mechanism and magnitude must be supported by individual studies rather than assumed.

Inference often has request-response behavior, so average latency may conceal slow requests. A reported p95 or p99 is the corresponding empirical latency quantile under a specified load, observation window and measurement method; it does not by itself prove a service-level objective (SLO) was met. Training-only behavior cannot be substituted for inference-serving evidence. GPU sharing should therefore be appraised under concurrent tenants, with workload, request rate, batching and baseline made explicit.

Table 2: Evaluation aspects and operational interpretation

Aspect	Purpose and evidence to record
GPU utilization	Instrument, sampling interval, denominator and activity definition; do not equate device activity with useful work.
Tenant density	Number of concurrent eligible workloads per physical GPU at a stated performance threshold and resource allocation.
Throughput	Completed inference requests or tokens per time unit, with batching and input/output lengths when relevant.
Latency	Defined response-time interval and mean/median statistic at a stated offered load.
Tail latency	p95/p99 or other reported quantile, sample size/window and SLO condition.
Predictability	Within-tenant variability or ability to sustain stated latency/throughput targets across co-tenant mixes.
Resource isolation	Separate compute interference, memory/bandwidth partitioning and any security claim; record measurement versus specification.
Fault isolation	Whether a fault in one tenant is contained from others, with the actual fault model and evidence.

This topic is relevant to inference-as-a-service, multi-model serving and edge systems. Existing studies can differ in hardware, model, batch size, baselines and metrics, so a percentage from one study cannot automatically be compared to a number from another. Examples identified for search-strategy validation include PipeSwitch (temporal switching), REEF (preemptive inference scheduling), gpulets (spatio-temporal partitioning), and ParvaGPU (MIG/MPS spatial sharing) [4, 5, 6, 7]. Their publication identities were checked against conference or publisher records; they are *candidate seeds*, not studies selected by this review. A prior survey covers the broader multi-tenant inference stack and informs an overlap check, but is not a primary study [8]. The protocol-led method follows software-engineering review guidance [9]; PRISMA 2020 informs transparent selection reporting [10].

2 Research Objective

The main objective is to systematically identify, classify and synthesize peer-reviewed primary evidence on sharing one physical GPU among concurrent machine-learning inference tenants. The core comparison concerns time-slicing, NVIDIA Multi-Process Service (MPS), Multi-Instance GPU (MIG) and GPU API interception/remoting. GPU virtualization, custom scheduling and hybrids are coded as implementation layers or combinations when their inference evidence can be attributed to a core family.

The review will examine GPU utilization, tenant density, inference throughput, average/median and tail latency, predictability, cross-tenant interference, resource isolation and fault isolation. It will record the conditions in which each result was obtained, assess methodological strengths and limitations, and develop conditional guidance for engineers. A weak or absent comparison will be reported as a gap, not filled by presumed performance. The final primary-study target in the course guideline is approximately 15–20; this is a planning target, never a reason to relax eligibility or invent studies.

3 Scope and Boundaries

The unit of interest is sharing a single physical GPU for multiple inference tenants, even if the wider serving system uses several nodes or the GPU is accessed through an API proxy. A cluster paper can qualify only if separately reported same-GPU inference-sharing measurements can be extracted. API remoting is eligible only when the remoted endpoint is a shared GPU and its tenant-level effects are separable; mere remote execution is insufficient. Mixed training/inference work can qualify only if the inference subset is separable. GPU model serving, deep-learning inference, and related request-serving workloads qualify; training-only, non-GPU accelerators, pure CPU scheduling and cluster-only placement do not.

Eligibility is *conjunctive*: a paper must meet the publication, mechanism, concurrent-inference, single-GPU evidence, evaluability and date requirements in Section 7. A study does not qualify merely because it mentions one keyword. Surveys, position papers, vendor manuals and preprints may help vocabulary, references and contextual explanation, but are logged outside the primary-study set. A preprint with a later peer-reviewed version is resolved to the final version.

4 Research Questions

Five questions cover mechanism classification, measurement, outcomes, isolation and conditional choice. The taxonomy is a mapping device within a full evidence review, informed by the systematic mapping distinction of Petersen *et al.* [11].

Table 3: Research questions and required evidence

ID	Research question	Evidence/output
RQ1	What time-slicing, MPS, MIG and API remoting mechanisms are evaluated for concurrent inference on one GPU, and how do sharing granularity, layer and isolation boundary classify them?	Mechanism taxonomy and design/evidence table.
RQ2	How do studies measure utilization, throughput, density, average/tail latency, predictability and interference, and how comparable are their experimental methods?	Metric definitions, hardware/workload/baseline matrix and comparability flags.
RQ3	Under what GPU, workload, batch, tenant mix and configuration conditions are changes in utilization, throughput, density and latency reported?	Conditional outcome tables, direct contrasts and uncertainty.
RQ4	What resource and fault isolation properties, trade-offs, implementation costs and conflicting results are reported, and what limits the evidence?	Isolation evidence matrix, quality appraisal and methodological gaps.
RQ5	Which approach or combination is supported for specified inference-serving conditions and priorities, with what confidence and alternatives?	Conditional decision matrix; no universal winner presumed.

5 Search Strategy

A predefined, reproducible strategy combines database searching and separately logged citation chasing. Its objective is reasonable coverage of peer-reviewed systems literature rather than an assertion that one index contains every paper. The expressions below are complete *planned* inputs. Database-specific field settings, exact accepted strings, search dates and returned counts belong in the search log when the searches are run. PRISMA-S informs reporting of the full search method [12].

5.1 Selected academic databases

The course guideline prefers at least four suitable sources from NED's E-Databases section. NED's E-Resources and Research Guide pages are the selection basis [13, 14]. Table 4 specifies four formal search interfaces. Institutional listing does not establish current individual entitlement; if one source is unavailable, the attempt and justified replacement must be documented by amendment.

Table 4: Selected search resources and purpose

Database/platform	Role	Rationale and handling
IEEE Xplore	Formal	Engineering, computing, architecture and conference/journal coverage; test metadata fields and export.
ACM Digital Library	Formal	Computing and systems proceedings/journals; record Advanced Search scope and generated query.
ScienceDirect	Formal	Elsevier journal/book-series coverage; log exact field scope and filter behavior, avoiding an unsupported claim of complete conference coverage.
Springer Nature Link	Formal	Springer Nature computing/engineering coverage; document whether search targets metadata or full text.
Scopus, Web of Science	Citation check	Cross-publisher indexing and citation checking if available; if promoted to formal searches, record full runs and amend protocol.
Google Scholar; publisher references	Discovery	Backward/forward citation leads and access routes; not a substitute for formal runs. Record every discovered report's provenance.

5.2 Search keyword framework

The two mandatory concept groups are sharing/mechanism and inference. Group C is *not* mandatory in the main query, because papers can report outcomes without naming them in metadata. The executable inference block uses the broad term **inference** (which also matches phrases such as "DNN inference" when indexed literally) plus explicit serving phrases that need not contain that word. More specific inference phrases in the keyword framework are candidates for documented sensitivity refinements, rather than an assertion that every variation is separately pasted into each expression. Search sensitivity is checked against independently identified candidate publications across the mechanism families; a seed is not an included primary study.

Table 5: Concept groups and candidate terms

Group	Role	Terms and variations
A. GPU sharing	Mandatory	GPU sharing, multi-tenant/multitenant GPU, GPU virtualization, partitioning, isolation, consolidation, scheduling, time-slicing/time sharing; MPS/multi-process service; MIG/multi-instance GPU; API/CUDA remoting, interception and proxying. Pair ambiguous acronyms with GPU.

Group	Role	Terms and variations
B. Inference	Mandatory	Planned core block: inference, model serving, ML serving, LLM serving, DNN serving. Additional variants for pilot/seed checks: deep-learning inference, DNN inference and inference serving (covered by the unquoted **inference** term where indexed).
C. Outcomes	Screen/extract	GPU utilization, throughput, tenant density, latency, p95/p99, SLO, interference, predictability, resource and fault isolation. Not required in core query.

5.3 Search strings by database

Each core search combines sharing/mechanism terms with inference/serving terms using AND. Three core expressions per database cover broad sharing, named temporal/MPS/MIG mechanisms and API remoting. A fourth, narrowly targeted expression per database seeks pre-2020 MPS evidence for the documented older-study exception. Acronyms occur only with GPU context. Execution, any interface adaptation, field settings and actual results must be recorded verbatim in the later search log. Official IEEE, ACM, Elsevier and Springer search help informed the entry choices [15, 16, 17, 18].

IEEE Xplore Command Search. Select *All Metadata*; enter each expression separately. The field label follows IEEE's Command Search conventions. Apply publication years 2020–2026 and record the interface's exact date range, type and language filter settings [15].

```
I1 = ("All Metadata":"GPU sharing" OR "All Metadata":"GPU partitioning"
 OR "All Metadata":"multi-tenant GPU" OR "All Metadata":"GPU virtualization")
 AND ("All Metadata":inference OR "All Metadata":"model serving" OR

```

ScienceDirect Advanced Search. Select *Title, abstract, or author-specified keywords* under *Show more fields*; the general "Find articles with these terms" field searches the body and is not the planned scope. Record the actual selected field and accepted query. Apply the date range and available article-type filters, then verify peer review and eligibility at screening [17].

```
D1 = ("GPU sharing" OR "GPU partitioning" OR "multi-tenant GPU"
 OR "GPU virtualization") AND (inference OR "model serving" OR
 "ML serving" OR "LLM serving" OR "DNN serving")

D2 = GPU AND (MPS OR "multi-process service" OR MIG OR
 "multi-instance GPU" OR "time slicing" OR "time sharing")
 AND (inference OR "model serving" OR "ML serving" OR
 "LLM serving" OR "DNN serving")

D3 = GPU AND ("API remoting" OR "CUDA remoting" OR
 "API interception" OR "GPU proxy")
 AND (inference OR "model serving" OR "ML serving" OR
 "LLM serving" OR "DNN serving")

H3 = GPU AND (MPS OR "multi-process service" OR
 "multi process service")
 AND (inference OR "model serving" OR "DNN serving")
```

Springer Nature Link Advanced Search. Enter each expression in *Keywords*, which Springer states searches title, abstract and body; there is a *Title* field but no documented abstract-only field in its listed options. Pilot the full-text noise and result volume as specified in Section 5.3. If needed, run a supplementary, separately logged Title-field precision search while retaining recall coverage from the Keywords runs. Apply the publication-date range and filter out books/chapters at screening or through a documented interface filter [18].

```
S1 = ("GPU sharing" OR "GPU partitioning" OR "multi-tenant GPU"
 OR "GPU virtualization") AND (inference OR "model serving" OR
 "ML serving" OR "LLM serving" OR "DNN serving")
```

```
S2 = GPU AND (MPS OR "multi-process service" OR MIG OR
 "multi-instance GPU" OR "time slicing" OR "time sharing")
 AND (inference OR "model serving" OR "ML serving" OR
 "LLM serving" OR "DNN serving")

S3 = GPU AND ("API remoting" OR "CUDA remoting" OR
 "API interception" OR "GPU proxy")
 AND (inference OR "model serving" OR "ML serving" OR
 "LLM serving" OR "DNN serving")

H4 = GPU AND (MPS OR "multi-process service" OR
 "multi process service")
 AND (inference OR "model serving" OR "DNN serving")
```

Date and adaptation rule. I1–S3 are the twelve main-window queries (1 January 2020 through the actual 2026 run date); H1–H4 are four supplementary pre-2020 MPS queries (all indexed years through 31 December 2019). Query identifiers are protocol labels, not text to paste. If an interface rejects an expression or cannot set the historical date boundary, log the error and the closest semantically equivalent accepted query/filter, preserving both. Record any platform-specific stemming, phrase interpretation, collection scope, field and export limit rather than assuming them. The final report will print the exact executed strings, fields, years and real results by database and search lane.

For each platform, merge its core and historical-lane exports, then deduplicate across sources. The validation seeds are PipeSwitch, REEF, gpulets and ParvaGPU, whose publication records are independently available [4, 5, 6, 7]. Inspect approximately the first 20 pilot hits per expression for false matches and record whether each seed indexed in that platform is retrieved; a seed absent from a publisher-specific collection is not automatically a query failure. For broad full-text fields, record the proportion of clearly irrelevant pilot hits and the observed result volume; refine a noisy expression by narrower phrases or a logged supplementary Title-field search, while retaining a recall-oriented route for papers whose title omits the mechanism. If an expected indexed paper is missed, revise terms and log the original and revised accepted expressions, reason and coverage effect. Outcome terms remain optional. The *search-run log* records platform, interface, exact accepted query, field, filters, access route, date/time, searcher, returned/exported counts, export filename/hash and notes. Citation chasing receives a separate source, date, direction and count. No numbers are inserted before real runs.

6 Publication Period

The formal main window begins 1 January 2020 and ends on each actual final search date in 2026, which will be recorded. This follows the guideline's recent-window preference and captures currently relevant MIG-era inference work without pretending that all foundational work began in 2020. To reduce historical bias for MPS, a prespecified targeted search (H1–H4) covers each database's indexed records before 1 January 2020, with no arbitrary lower year boundary; backward citation leads are logged separately. The historical lane is a discovery route, not automatic eligibility: an older peer-reviewed study may enter only through an individually logged exception if it introduces or establishes the evaluated mechanism, or supplies a directly relevant inference-sharing baseline that the main-window studies do not adequately document. Record discovery route, full-text evidence, specific need, decision by both reviewers and year. Apply IC1–IC5 and the same quality rubric. Tabulate older exceptions separately in the final study characteristics and sensitivity discussion. Older context-only references are not primary-study counts. An update near final submission should

use the same protocol or a justified amendment. No study after a recorded cutoff is silently added.

7 Inclusion Criteria

All conditions in Table 6 must be met at full text. Inference and mechanism evidence cannot be substituted by general claims in an abstract.

Table 6: Conjunctive inclusion criteria

ID	Criterion
IC1	Final, English, peer-reviewed full conference or journal primary study. Verify venue/version; preprints and technical reports alone are context only.
IC2	Presents, evaluates or empirically measures one of the assigned local sharing families (or a classifiable virtualization/scheduler/hybrid) among distinct concurrent tenants/processes/models/applications on one physical GPU.
IC3	Includes ML/DL inference or model-serving workload. Mixed training/inference studies require separable inference results.
IC4	Reports at least one relevant inspectable utilization, density, throughput, latency/tail/predictability, interference, resource isolation or fault-isolation outcome under the sharing setup, with sufficient method and configuration detail to interpret it.
IC5	Provides an extractable within-one-physical-GPU result, comparison or per-GPU co-tenant measurement, even if the containing server or scheduler uses multiple GPUs; enough full text is available for appraisal and extraction. A dedicated single-GPU-only experiment is not required.
IC6	Falls in the main publication window or satisfies a documented seminal exception.

8 Exclusion Criteria

At full-text assessment, assign one primary decisive reason in the order below, with secondary notes if useful. Duplicates and uncollected full texts are accounted for *before* assessed-report exclusions in PRISMA 2020 [10].

Table 7: Full-text exclusion codes

ID	Criterion
EC1	Non-primary or non-peer-reviewed version: survey, tutorial, editorial, position/vision paper, vendor document, preprint-only, poster or abstract-only item. Relevant reviews stay in a separate context/citation list.
EC2	Training-only or no concurrent inference tenants/evaluable inference-sharing outcome.

ID	Criterion
EC3	Hardware-only or microarchitecture-only work with no evaluated systems-level sharing mechanism.
EC4	Cluster/multiple-GPU scheduling or remote execution reporting only aggregate system results, with no extractable concurrent co-tenant evidence on one physical GPU. A multi-GPU paper is not excluded solely for its scale.
EC5	Non-GPU accelerator without a relevant evaluated GPU mechanism.
EC6	Insufficient full-text methods, workload/configuration or outcomes to answer any RQ.
EC7	Outside date window without accepted seminal exception, or non-English full text.

Identical imports are linked and removed before screening. Multiple reports of one study are linked and the most complete peer-reviewed report is prioritized; distinct results in companion reports remain traceable. For a report that cannot be obtained after documented library, repository and author-contact attempts, log "report not retrieved," not EC6. Record whether a paper is inaccessible or merely unassessed; neither supplies a fabricated result.

9 Screening and Study Selection

Study selection will follow PRISMA 2020 reporting categories [10], retaining separate record, report and study identifiers, independent votes and reconciled counts.

9.1 Seven-step workflow

Step 1: Database searching. Run each frozen string and record interface, exact query, filters, date/time and counts. Save raw exports untouched.

Step 2: Result export. Export title, author, venue, year, abstract, DOI/URL and source-query fields where available. Assign immutable imported record IDs (R001, etc.).

Step 3: Deduplication. First match normalized DOI; then review title, authors and year manually. Keep all source links, identify a canonical record, and record removed-before-screening counts. Do not conflate records with unique studies.

Step 4: Title screening. Two independent reviewers mark include, exclude or uncertain. Keep uncertain records if title alone cannot establish ineligibility.

Step 5: Abstract screening. Apply the same predeclared criteria independently to retained records. Record both initial votes and a short reason; resolve disagreement before full-text retrieval.

Step 6: Full-text screening. Assign report IDs (P001, etc.), log retrieval attempts and PRISMA reports not retrieved. Two reviewers independently apply all criteria to available reports. Record one decisive EC code with explanation and page/section if excluded.

Step 7: Final selection. Link eligible reports to unique study IDs (S001, etc.). Only eligible primary studies proceed to quality assessment, extraction and synthesis.

9.2 Decision register and reviewer agreement

The spreadsheet will store immutable R/P/S identifiers; title, DOI, source database(s), source query/run, year and version; stage and reviewer; each independent include/exclude/uncertain vote; criterion, short justification and timestamp; adjudicator decision and reason; retrieval status and attempts; primary full-text EC code; and version links. A criteria pilot on approximately ten diverse records will identify ambiguous interpretations before large-scale screening. Each record receives two independent votes at title/abstract and full text; the third group member adjudicates unresolved differences. Preserve initial and final decisions rather than overwriting them. Consultation with the supervisor can be logged for unresolved scope issues, not used to invent eligibility.

9.3 PRISMA count reconciliation

From the register compute records identified by each database/other source, duplicate and other pre-screen removals, unique records screened, records excluded, reports sought, reports not retrieved, reports assessed, reports excluded by primary reason, and unique included studies. Check that identified minus pre-screen removals equals screened; screened minus excluded equals reports sought (adjusting explicitly for record-to-report links); sought minus not retrieved equals assessed; assessed minus excluded equals included reports; then map included reports to studies. If a report maps to more than one record or a study has multiple reports, disclose the mapping and reconcile counts. Counts are reported from the later executed search, not estimated in this protocol.

10 Quality Assessment

Ten criteria use a 0–2 scale: score **0** when absent/unclear, **1** when partly addressed and **2** when sufficiently supported. Maximum is **20**. A score is an appraisal of reporting and internal validity relevant to this review; it is not a publication prestige measure or an automatic inclusion gate. For each criterion record a brief rationale and source page/table/figure. Two reviewers score independently and reconcile differences, preserving initial scores.

Table 8: Ten-item study appraisal rubric; requirements for score 2

ID	Criterion	Score 2 requires
Q1	Clarity of objective	The problem, proposed mechanism and evaluated questions are clear.
Q2	Technical description	Sharing primitive, configuration and relevant implementation layer are described sufficiently to classify it.
Q3	Experimental transparency	Setup, measurement procedure, repetitions or analytical method and result provenance are clear.
Q4	Hardware/workload description	GPU model/generation, software environment and concurrent inference workload/tenant characteristics are reported.

ID	Criterion	Score 2 requires
Q5	Baseline fairness	A relevant baseline is specified and comparable workload, resource allocation and measurement conditions are documented or justified.
Q6	Utilization/throughput	Any claimed utilization, throughput or density benefit uses a defined metric, unit and method; a paper without these claims explains its alternate outcome.
Q7	Latency measurement	Claimed latency results specify interval, load, statistic and measurement method; tail/SLO results include p95/p99 or stated quantile when claimed.
Q8	Multi-tenant interference	Multiple concurrent tenants/co-tenant conditions are tested and sufficient evidence supports interference conclusions.
Q9	Isolation evaluation	Any claimed resource, security or fault isolation has a defined boundary and direct test or appropriately delimited evidence.
Q10	Replication/limits	Details/artifacts permit informed replication and threats, limits or configuration dependence are discussed.

For criteria tied to a claim that a paper genuinely does not make, record a reasoned N/A instead of assigning an artificial failure; report the raw sum, applicable maximum and normalized percentage. The team will check whether this rule produces inconsistent scoring during a two-study calibration before freeze and amend it if needed. Eligible lower-quality studies remain in the synthesis. Report whether major conclusions change when studies below 60% of applicable points are excluded in a sensitivity view; these thresholds guide interpretation, not study selection. Do not hide disagreement or aggregate dissimilar evidence mechanically.

11 Data Extraction Fields

Use a structured form consistently for every eligible study. Categories A–M include source anchors and comparator conditions. Use one row per *study* × *mechanism/configuration* × *inference workload/contrast* × *outcome*; maintain a study-level identity sheet to avoid counting rows as independent studies. Enter **NR** (not reported) for absent values, not zero or an estimate. Mark an author's claim separately from a direct measurement. A second reviewer checks headline numerical outcomes against the source PDF.

Table 9: Extraction form categories

Category	Fields
A. Bibliographic information	R/P/S IDs, title, authors, year, venue/type, DOI/publisher URL, peer-review/version state, search provenance, source PDF page/figure/table for each extracted claim.

Category	Fields
B. GPU/system environment	GPU vendor, model/generation, count and memory, OS, driver/CUDA/runtime/framework versions, node/virtualization environment.
C. ML workload	Model/family/size, task, dataset/request traces, input/output characteristics, batch size, arrival rate, warm-up and inference mode.
D. GPU sharing mechanism	Time-slicing, MPS, MIG, API remoting, virtualization, custom scheduler or hybrid; mechanism layer, capability assumptions and implementation version.
E. Scheduling/partitioning	Policy, time slice, MIG profile/number of instances, MPS settings/caps, resource allocation, API intercept/transport and locality.
F. Utilization/throughput	GPU utilization instrument/denominator/interval, completed requests/tokens per second, tenant density with threshold; raw value and units.
G. Latency	Mean/median, p95/p99, variation, SLO/violation rate, clock interval, sample/window, load and exact unit.
H. Multi-tenant interference	Concurrent tenant count and mix, co-tenant load, standalone versus shared baseline, slowdown or interference calculation.
I. Isolation	Performance interference, resource/memory partitioning, security boundary, fault containment; measured/claimed/NR, fault model and evidence anchor.
J. Experimental methodology	Baseline equality, repetitions, error bars/confidence intervals, statistical test, instrumentation, warm-up, threats and reported limitations.
K. Findings/trade-offs	Exact result direction/magnitude and denominator, authors' interpretation, contrary/null results, implementation/operational costs and applicability.
L. Reproducibility	Code, artifact, dataset, trace, setup and access location; availability claim and date checked.
M. Quality assessment	Q1–Q10 initial/reconciled score, applicable maximum, rationales, anchors, reviewer and check status.

Numeric values remain attached to their specific baseline and configuration. Do not convert figures by visual approximation unless the method is stated and uncertainty recorded. If a paper reports both p95 and p99, keep them separate. For hybrid systems, code each underlying primitive plus the hybrid label. For a distributed serving system, extract only separable single-device effects. Preserve verbatim short quotations only when necessary, quoted and page-anchored; the final prose should paraphrase faithfully and cite the source.

12 Evidence Synthesis Strategy

A structured narrative and comparative table synthesis is planned. Studies will likely differ in hardware, workload, co-tenants, baseline and metrics, so a pooled statistical meta-analysis is not presumed. If genuinely compatible contrasts emerge, a later dated amendment must define effect measure, comparability rule and heterogeneity treatment before pooling.

Table 10: Synthesis areas and outputs

Area	Analysis/output
Mechanism comparison	Taxonomy of time-slicing, MPS, MIG, API remoting, contextual virtualization/schedulers and hybrids; map sharing granularity and implementation layer to RQ1.
Utilization/throughput	Compare reported utilization, throughput and tenant density at stated load and baseline; map to RQ2/RQ3.
Latency/predictability	Compare mean/median and p95/p99 with quantile definition, tenant mix and SLO, including negative or null results; map to RQ2/RQ3.
Interference/isolation	Separate tested interference, partitioning, security and fault containment from undocumented vendor/product claims; map to RQ4.
Trade-offs	Trace utilization/density against per-tenant latency and isolation with comparable baseline conditions; map to RQ3–RQ5.
Research gaps	Report missing direct comparisons, weak baselines, unreported workloads/percentiles and limitations; map to RQ2/RQ4/RQ5.

Comparison rule. Separate within-paper head-to-head comparisons from cross-paper observations. Cross-study numbers are only juxtaposed in hardware, model, batch, concurrent-tenant count, load, metric and baseline strata sufficiently similar to interpret; otherwise describe qualitatively and explicitly state non-comparability. Explain conflicting findings with observed configurations and study limitations without speculating beyond evidence. Integrate the quality rubric and repeat key conclusions without low-quality studies to check robustness. A conditional decision matrix will list scenario/priorities, eligible mechanism, observed benefit, sacrifice, deployment constraint, alternative, evidence sources and confidence. It must permit "insufficient evidence." No universal superior mechanism is assumed.

13 Protocol Changes and Governance

Major changes after searching starts must be dated, justified and traceable. This includes changes to databases, search fields/terms, date range, eligibility, RQs, quality rubric, extraction or synthesis. Pilot refinements are also retained so the final query can be reconstructed. Editorial spelling and layout corrections do not constitute methodological changes. Search exports and earlier protocol versions must be preserved; changed eligibility requires re-screening of affected records and updated PRISMA counts.

Table 11: Required amendment-register fields

Field	Entry	Why recorded
Date and protocol version	UTC date/time, author and group decision	Establish order relative to search and selection.
Old and new rule	Literal former and revised wording/query	Permit exact reconstruction.
Rationale	Pilot evidence, feasibility or discovered ambiguity	Explain the methodological decision.
Impact and remedy	Affected runs, records, counts, re-search or re-screen action	Keep study selection and PRISMA flow consistent.

14 Protocol Summary

This protocol defines a systematic review of GPU sharing for multi-tenant inference on one physical GPU. Four selected academic database interfaces will be searched with twelve logged main-window expressions and four targeted older-MPS expressions. The main primary-study period is 2020 through the actual final search in 2026, with individually justified older seminal exceptions. Two reviewers will independently screen and appraise peer-reviewed primary studies, log retrieval and disagreements, and construct a PRISMA 2020 flow. Structured extraction with page-level evidence will support a condition-aware narrative synthesis of utilization, density, latency, interference and isolation. Major changes after searching will be documented and justified.

A Operational Forms to Complete Before and During the Review

The review log will implement these field specifications electronically, with one row per event or decision and immutable identifiers. Values and counts will be entered from actual searches and screening.

A.1 Search-run and seed-recall form

Table 12: Blank search-run field specification

Field	Entry rule
Run ID; operator; UTC/local date/time	Assign once per interface/query/filter combination.
Database; URL; institutional access	Record exact platform, interface version if visible, entitlement or access route.

Field	Entry rule
Query ID; exact accepted query	Preserve literal text copied from interface and original pilot proposal separately.
Field scope; filters	Title/abstract/keywords/full text, date, language, type; note unsupported filters.
Returned and exported counts	Capture real numbers and explain any mismatch.
Export filename/hash; source link	Save untouched RIS/BibTeX/CSV or screenshot, with provenance.
Seed-study recall	List known candidate identifiers tested, retrieved/not retrieved, and why changes were made.
Change and sign-off	Link amendment version and responsible reviewer; do not overwrite earlier run.

A.2 Screening, appraisal and extraction check

At title/abstract and full text, Reviewer A and Reviewer B independently record their initial vote, code and rationale; Reviewer C records any adjudication. The full-text row also records retrieval attempts and the first decisive exclusion reason. A link table maps imported record IDs to reports and unique studies, preserving original source membership. For each included study, one reviewer extracts evidence and a second checks the mechanism classification, baseline and each headline number against a page, table or figure.

Table 13: Blank decision and extraction field specification

Entity	Required traceability
Record R#	Source run, DOI/title, duplicate linkage, two independent votes, reason and final decision.
Report P#	Full-text URL/version, retrieval status and attempts, two votes, exclusion reason and adjudication.
Study S#	Linked eligible reports, mechanism family, publication identity, peer-review verification and seminal-exception note if any.
Appraisal Q1–Q10	Reviewer scores, rationales, anchors, reconciliation, applicable maximum and sensitivity flag.
Outcome row	Study/mechanism/workload/contrast, baseline, cotenants, hardware, exact value/unit/statistic, source anchor and independent check.
Interpretation row	RQ, direct or cross-study comparison, supporting and conflicting evidence, limitation and confidence.
